Interior Design Using Hand Sketching, SketchUp and Photoshop - Daniel John Stine 2011

This book is designed for the interior designer wanting to use hand sketching techniques, Google SketchUp, and Adobe Photoshop together to create beautiful designs and presentations. This book will teach you how to come up with fresh new design ideas and how to save time by using these powerful tools and techniques. This book presumes no previous experience with any of these tools and is divided into three sections. In the first section you will learn to use SketchUp and Photoshop starting with navigating the interface and then learning their features. In the next section you will learn hand sketching techniques and how to combine these with digital tools. In the last section of the book you will complete an interior design project leveraging the tools and techniques you learned in previous chapters while learning a few new techniques along the way. The first two chapters cover computer basics, including managing files and knowing your way around the operating system. The next three chapters introduce the reader to SketchUp, an easy to use 3D modeling

program geared specifically towards architecture. Chapters six and seven present the basic tools found in Photoshop, which is the industry standard raster image editing software. Once you have worked through all the technology related introduction chapters, you will explore four chapters on various aspects of hand sketching. These chapters mainly focus on interior drawing concepts. The final four chapters work through the concept design process for an interior fit out project. The intent is that the reader would recreate these drawings as they appear in the book. The goal is to focus on understanding the process and developing the required techniques rather than getting bogged down in design right away.

Eco-Architecture implies a new approach to the design process intended to harmonise its products with nature. This involves ideas such as minimum use of energy at each stage of the building process, taking into account the amount required during the extraction and transportation of materials, their fabrication, assembly, building erection, maintenance and eventual future recycling. Presentations in the conference were related to topics like building technologies, design by passive systems, design with nature, ecological and cultural sensitivity, life cycle assessment, quantifying sustainability in architecture, resources and rehabilitation, and issues from education, research and practice. Case studies from different places around the world were also presented.

*Model-Driven Architecture in Practice* - Oscar Pastor  
2007-06-14

This book introduces all the relevant information required to understand and put Model Driven Architecture (MDA) into industrial practice. It clearly explains which conceptual primitives should be present in a system specification, how to use UML to properly represent this subset of basic conceptual constructs, how to identify just those diagrams and modeling constructs that are

actually required to create a meaningful conceptual schema, and how to accomplish the transformation process between the problem space and the solution space. The approach is fully supported by commercially available tools.
