Between MITI and the Market - Daniel I. Okimoto 1989

Over the postwar period, the scope of industrial policy has expanded markedly. Governments in virtually all advanced industrial countries have extended the visible hand of the state in assisting specific industries or individual companies. Although greater government involvement in some countries has lessened the dislocations brought about by slower growth rates, industrial policy has also caused or exacerbated a number of other problems, including distortions in the allocation of capital and labor and trade conflicts that undermine the postwar system of free trade. Only Japan is widely cited as an unambiguous success story. The effectiveness of its industrial policy is revealed in the successful emergence of one government-targeted industry after another as world-class competitors: for example, steel, automobiles, and semiconductors. Foreign countries fear that a number of still-developing industries—like biotechnology, telecommunications, and information processing—will follow the same pattern. But is industrial policy the main reason for Japan's economic achievements? The author asserts that the reasons for Japan's spectacular track record go well beyond the realm of industrial policy into broad areas of the political economy as a whole. In this book, the author attempts to identify the reasons for the comparative

effectiveness of Japanese industrial policy for high technology by answering the following questions: What is the attitude of Japanese leaders toward state intervention in the marketplace? What is the Ministry of International Trade and Industry (MITI) doing to promote the development of high technology? How has the organization of the private sector contributed to MITI's capacity to intervene effectively? What elements in Japan's political system help insulate industrial policymaking from the demands of interest-group politics?

Opening America's Market - Alfred E. Eckes Jr. 2000-11-09

Despite the passage of NAFTA and other recent free trade victories in the United States, former U.S. trade official Alfred Eckes warns that these developments have a dark side. *Opening America's Market* offers a bold critique of U.S. trade policies over the last sixty years, placing them within a historical perspective. Eckes reconsiders trade policy issues and events from Benjamin Franklin to Bill Clinton, attributing growing political unrest and economic insecurity in the 1990s to shortsighted policy decisions made in the generation after World War II. Eager to win the Cold War and promote the benefits of free trade, American officials generously opened the domestic market to imports but tolerated foreign discrimination against American goods. American consumers and

corporations gained in the resulting global economy, but many low-skilled workers have become casualties. Eckes also challenges criticisms of the 'infamous' protectionist Smoot-Hawley Tariff Act of 1930, which allegedly worsened the Great Depression and provoked foreign retaliation. In trade history, he says, this episode was merely a mole hill, not a mountain.

Economic and Geopolitical Perspectives of the Commonwealth of Independent States and Eurasia - Karnaukhova, Oxana 2018-06-01

The Commonwealth of Independent States (CIS) is a regional organization that formed during the breakup of the Soviet Union in 1991. Handbook of Deep Trade Agreements - Aaditya Mattoo 2020-09-23

Deep trade agreements (DTAs) cover not just trade but additional policy areas, such as international flows of investment and labor and the protection of intellectual property rights and the environment. Their goal is integration beyond trade or deep integration. These agreements matter for economic development. Their rules influence how countries (and hence, the people and firms that live and operate within them) transact, invest, work, and ultimately, develop. Trade and investment regimes determine the extent of economic integration, competition rules affect economic efficiency, intellectual property rights matter for innovation, and environmental and labor rules contribute to environmental and social outcomes. This Handbook provides the tools and data needed to analyze these new dimensions of integration and to assess the content and consequences of DTAs. The Handbook and the accompanying database are the result of collaboration between experts in different policy areas from academia and other international organizations, including the International Trade Centre (ITC), Organisation for Economic Co-operation and Development (OECD), United Nations Conference on Trade and Development (UNCTAD), and World Trade Organization (WTO).

Australia's Linkages with China: Prospects and Ramifications of China's Economic Transition - Mr. Philippe D Karam 2018-05-22

China and Australia have increasingly strong links, especially through trade. These are driven by demand from China for Australian commodities (coal and iron ore) and services (tourism and education). These links are influenced by China's transition to a services-driven, consumer-led economy. Using ANZIMF, the Australia-New Zealand Integrated Monetary and Fiscal model, three risks (both upside and downside) to China during this transition process are considered, focusing on their spillovers to Australia. One simple takeaway is central to each risk - while the real GDP response to shocks in Australia typically is small, responses in demand components or sectors are usually much larger- along with three further takeaways, all of which help in the analysis of Australia in relation to any risk emanating from China.

The End-use Markets for 13 Nonferrous Metals - 1986

Australia - International Monetary Fund. Asia and Pacific Dept
2018-02-20

This Selected Issues paper on Australia discusses prospects and ramifications of China's economic transition. Australia and China have strong linkages that are growing over time as China carries on with its economic transition. Trade in commodities and services are constantly growing. Australia has established itself as a dominant player in some key Chinese import needs, particularly for steel. The stylized facts also demonstrate that the rest of Asia is increasingly important for Australia. The charts for tourism, education, and the destination of exports illustrate that both advanced and emerging Asia already have a growing impact. The paper shows that the rest of Asia's trade linkages with Australia are similar in size to the linkages between Australia and China. China may be Australia's largest trading partner, but the rest of Asia is also a rapidly growing region, with potential markets for Australian expansion.

Subsidies to Chinese Industry - Usha C.V. Haley 2013-03-27

How did China move so swiftly in capital-intensive industries without labor-cost or scale advantage from bit player to the largest manufacturer and exporter in the world? This book argues that subsidies contributed significantly to China's success. Industrial subsidies in key Chinese manufacturing industries may exceed thirty percent of industrial output. Economic theories have mostly portrayed subsidies as distortive, inefficiently reallocating resources according to non-market criteria. However, China's state-capitalist regime uses subsidies to promote the governments' and the Communist Party of China's interests. Rather than aberrations, subsidies help Chinese businesses and governments produce, stabilize and create common understandings of markets; the flows of capital reflect struggles between critical Chinese actors including central and provincial governments. Concepts of state capitalism including market-transition theory, the multi-organizational Chinese state, and state as paramount shareholder, create complex and relevant understandings of Chinese subsidies. The authors develop independent measures of industrial subsidies using publicly-reported data at firm and industry levels from governmental and private sources. Subsidies include free to low-cost loans, subsidies to energy (coal, electricity, natural gas, heavy oil) and to key inputs, land and technology. Four sequential studies identify the growth of subsidies to Chinese manufacturing over time and effects on world industry: steel (2000-2007), glass (2004-2008), paper (2002-2009) and auto parts (2001-2011). Subsidies to Chinese industry affect and are affected by business strategy and trade policy. Business strategies include lobbying for subsidies and for protection from subsidized foreign competitors and managing supply chains to guard against whiplash effects of

uncoordinated subsidies. The subsidized solar industry highlights how global business strategies and decisions on production location and technology development respond to production or consumption subsidies and include market (competitive) and non-market (political) strategies. The book also covers government policies and regulation on subsidies broadly focusing on domestic consumption (antidumping and countervailing duties) and domestic production (indigenous innovation).

U.S. Army Campaigns of the Civil War: The Civil War in the West, 1863 - Andrew N. Morris

The Civil War in the West, 1863, by Andrew N. Morris, is the latest addition to the Center of Military History's U.S. Army Campaigns of the Civil War series. In 1863, Union and Confederate forces fought for control of Chattanooga, a key rail center. The Confederates were victorious at nearby Chickamauga in September. However, renewed fighting in Chattanooga that November provided Union troops a victory, control of the city, and drove the Confederates south into Georgia. The Union success left its armies poised to invade the Deep South the following year.

[Clashing over Commerce](#) - Douglas A. Irwin 2017-11-29

Should the United States be open to commerce with other countries, or should it protect domestic industries from foreign competition? This question has been the source of bitter political conflict throughout American history. Such conflict was inevitable, James Madison argued in The Federalist Papers, because trade policy involves clashing economic interests. The struggle between the winners and losers from trade has

always been fierce because dollars and jobs are at stake: depending on what policy is chosen, some industries, farmers, and workers will prosper, while others will suffer. Douglas A. Irwin's Clashing over Commerce is the most authoritative and comprehensive history of US trade policy to date, offering a clear picture of the various economic and political forces that have shaped it. From the start, trade policy divided the nation—first when Thomas Jefferson declared an embargo on all foreign trade and then when South Carolina threatened to secede from the Union over excessive taxes on imports. The Civil War saw a shift toward protectionism, which then came under constant political attack. Then, controversy over the Smoot-Hawley tariff during the Great Depression led to a policy shift toward freer trade, involving trade agreements that eventually produced the World Trade Organization. Irwin makes sense of this turbulent history by showing how different economic interests tend to be grouped geographically, meaning that every proposed policy change found ready champions and opponents in Congress. As the Trump administration considers making major changes to US trade policy, Irwin's sweeping historical perspective helps illuminate the current debate. Deeply researched and rich with insight and detail, Clashing over Commerce provides valuable and enduring insights into US trade policy past and present.

Asia-Pacific Trade and Investment Report 2016 - United Nations

Economic and Social Commission for Asia and the Pacific 2016-10-05

The Asia-Pacific Trade and Investment Report (APTIR) is a major annual publication of the Trade, Investment and Innovation Division of United Nations ESCAP. It aims to deepen understanding of trends and developments in trade and investment in the Asia-Pacific region; emerging issues in trade, investment and trade facilitation policies, and impacts of these policies on countries' abilities to meet the challenges of achieving inclusive and sustainable development. It offers innovative policy options to meet the challenges of achieving sustainable trade and investment. APTIR 2016 shows that 2015-2016 has been a worrying period for trade and investment in the Asia-Pacific region and worldwide, and there are few signs that the current economic and trade slowdown is simply a temporary phenomenon. Instead, this pattern may be the result of a change in the fundamental structure of world trade, which might lead to a persistent trade stagnation. On the other hand, good progress was made, especially at the regional level, with furthering cross-border paperless trade as one of the approaches to deal with the upward pressure on the trade costs. Special feature of this volume is a chapter on digital trade in Asia-Pacific. Accepting the rising importance of e-commerce as a new trade platform, there is opening for the possible changes in the focus of trade and investment policies in order to leverage the potential of e-commerce to support intraregional trade.

Digital Trade in the U. S. and Global Economies - James Stamps

2014-10-22

Report of a government investigation to better understand the role of

digital trade -- domestic commerce and international trade conducted via the Internet -- in the U.S. and global economies, as well as the effects of barriers and impediments to digital trade that impede U.S. access to global markets. The analysis provides findings at three levels: at the firm level, through 10 case studies; at the industry level, through a survey of U.S. businesses; and at the economy-wide level, using computable general equilibrium and econometric models. This analysis shows that digital trade contributes to economic output by improving productivity and reducing trade costs. Digital trade's combined effects of increased productivity and lower trade costs are estimated to have increased U.S. real GDP by \$517.1-\$710.7 billion (3.4-4.8%). Figures and tables. This is a print on demand report.

U.S. Foreign Trade: Highlights of Exports and Imports - United States. Bureau of the Census 1971

[Perspectives on International Trade](#) - Elton V. Smith 2002

While some may dispute that economics is the driving force behind much of history, nobody can argue that trade is not a significant factor in international relations. In an increasingly globalised world, products are perpetually crossing borders, leading to both political and fiscal conflicts. Businesses have to face diverse markets and regions while worrying about protectionist government initiatives that hamper free trade. Even the ostensible champion of free markets, America, has its own streak of inhibiting the flow of goods; witness the recent steel tariffs which have angered European partners. No society, therefore, is immune to the pressures of world trade and the need to balance the free movement of products with the desire to preserve domestic industries. This book assembles a collection of articles examining some of the most current and divisive issues in the international trade arena. They range from the tensions between the United States and Mexico in NAFTA to the war-fuelled trade in diamonds in Africa. With such a broad range of issues discussed, this book serves as a needed tool for understanding the most important contemporary economic subjects.
