A Shark! Named Jamison - Consie Berghausen 2017-03-30

A Shark! Named Jamison is true story about the adventure and rescue of a juvenile great white shark on the coast of Cape Cod during the summer of 2015. A surprise landing for Jamison caused a surprise for the beach goers and unexpected rescue opportunity. Many of the researchers from the Atlantic White Shark Conservancy believe that the great white shark that washed up on a Chatham beach during the summer of 2015, and was tagged and named "Jamison," may have pulled through after his unexpected ordeal. The story, the rescue and the amazing community teamwork to ensure that Jamison's adventure ended with the shark's survival is still being admired around the world. In their new book, *A Shark! Named Jamison*, Consie and Nina Berghausen take on the challenge of creating a version of Jamison's true story and adventure written as a reader for ages 5-12 (K-6) and a great picture book for preschoolers. Their year-long effort to perfect both the text and illustrations of a colorful, fully illustrated book seems to have paid off. As the author, Consie gives the young readers an opportunity to go inside the mind of "Jamison" and imagine how a juvenile white shark could find himself in such a position. In the thirty-eight page book, she challenges the young reader to imagine what Jamison must have been thinking as he was the center of attention in the waters and on a beach in beautiful Cape Cod. Her distinctive sense of rhyme and her gentle treatment of a harrowing ordeal skillfully allow young readers to enjoy the suspense of a good story "gone badly" and then "good again." Nina's ascending brilliance as an illustrator and artist is displayed on every page of the book. The way she is able to seamlessly choreograph her mother's sense of rhyme within the true, natural colors and unbelievable beauty of the waters and beaches of Cape Cod is quite captivating. At the front of the book, parents will find a "Parents Corner" page with some tantalizing facts about sharks to share with the youngest readers and prepare them for Jamison's amazing adventure. By all accounts, the mother and daughter team also display amazing teamwork in their new book and has exceeded all expectations. This is the fourth Book written and illustrated by the team of Consie and Nina Berghausen. Consie splits her time between Tucson, Arizona and Chatham, Massachusetts. Her home in Chatham is on a saltwater marsh. It is her many years of watching wildlife out her back window that inspired her debut novel, *The Saltwater Marsh, a Magical Place*. She and Riverhaven books most recently teamed up to publish her next story set in Chatham, *The Cormorant and the Clam*. A teacher and former therapist, Consie now enjoys writing about nature and wildlife. She plays the piano and a mean game of tennis. Nina is a graphic design artist in California. She enjoys working at the public library, playing tennis, and horseback riding. She also has a heart for animals.

Shark Attacks - Alex MacCormick 2015-09-08

More horrifying than Jaws-- because it's true! Since 1990 there have been 283 shark attacks worldwide-- 40 of which were fatal...In the past 15 years, reports of shark attacks have substantially increased...Over half the attacks occur in water no deeper than five feet... Believe it or not, shark attacks are still a very real threat to humans. These unspeakably bloody encounters happen in shallow water, in "safe" areas, to people just like you-- people who thought it could never happen to them. HONG KONG, 1995: A forty-five-year-old woman swimming in shallow water with fifty other people has one leg and one arm ripped off by the shark--she dies before reaching the hospital. CALIFORNIA, 1993: A man snorkeling with friends is swallowed headfirst halfway down his body--luckily, the shark spits him back out with only bite wounds. AUSTRALIA, 1993: A professional diver and mother of five is literally torn in half in front of her horrified family by a fifteen-foot great white shark. HAWAII, 1991: Two vacationing friends out for a swim suddenly see a shark "the size of a car" swim by. After one of the women begins thrashing in panic, the shark attacks and kills her-- her body is later recovered with several limbs missing. Read on for more blood-chilling accounts of people who fell prey to...SHARK ATTACKS.

The Biology of Sharks and Rays - A. Peter Klimley 2013-07-31

The Biology of Sharks and Rays is a comprehensive resource on the biological and physiological characteristics of the cartilaginous fishes: sharks, rays, and chimaeras. In sixteen chapters, organized by theme, A. Peter Klimley covers a broad spectrum of topics, including taxonomy, morphology, ecology, and physiology. For example, he explains the body design of sharks and why the ridged, toothlike denticles that cover their entire bodies are present on only part of the rays' bodies and are absent from those of chimaeras. Another chapter explores the anatomy of the jaws and the role of the muscles and teeth in jaw extension, seizure, and handling of prey. The chapters are richly illustrated with pictures of sharks, diagrams of sensory organs, drawings of the body postures of sharks during threat and reproductive displays, and maps showing the extent of the species' foraging range and long-distance migrations. Each chapter commences with an anecdote from the author about his own personal experience with the topic, followed by thought-provoking questions and a list of recommended readings in the scientific literature. The book will be a useful textbook for advanced ichthyology students as well as an encyclopedic source for those seeking a greater understanding of these fascinating creatures.

Biology of Sharks and Their Relatives, Second Edition - Jeffrey C. Carrier 2012-04-09

Virtually every area of research associated with sharks and their relatives has been strongly impacted by the revolutionary growth in technology. The questions we can now ask are very different than those reported even two decades ago. Modern immunological and genetic techniques, satellite telemetry and archival tagging, modern phylogenetic analysis, GIS, and bomb dating, are just a few of the techniques and procedures that have become a part of our investigative lexicon. A modern synthesis of the biology of Chondrichthyans, *Biology of Sharks and Their Relatives, Second Edition* discusses significant advances in the development and application of new molecular techniques to the understanding of the phylogenetic relationships among and between these groups. The book considers the effect of global changes on the status of sharks and their relatives, and how advances in technology and analytical techniques have changed not only how we approach problem solving and scientific investigations, but how we formulate questions. The book also introduces applications of new and novel laboratory devices, techniques, and field instruments. This second edition of the award winning and groundbreaking original exploration of the fundamental elements of the taxonomy, systematics, physiology, and ecology of sharks, skates, rays, and chimera, presents cohesive and integrated coverage of key topics and discusses technological advances used in modern shark research. Offering a well-rounded picture for students and researchers, and far above competitors in scope and

research, this new volume holds a wealth of data on the current status of Chondrichthyan research and provides the basis and springboard for original research. Cover photo by Justin Gilligan

Sand Sharks - Margaret Maron 2009-08-13

Judge Deborah Knott can't wait to trade the lush fields of Colleton County for the clear blue ocean and long stretches of sand at Wrightsville Beach. Lying beneath the hot summer sun in Wrightsville and reconnecting with old friends over delicious seafood dinners in nearby Wilmington, Deborah finally begins to unwind. But tensions are building beneath the surface of this seemingly peaceful resort area. Deborah's relaxing trip to the seaside takes a sudden, dark turn when she stumbles upon the strangled corpse of one of her less-admired colleagues. It doesn't take long before she realizes that the killer may have another target, much closer to home. Unwilling to stand idly by while the murderer draws near, Deborah begins to investigate alone. At each turn, her list of suspects grows to include everyone from her judicial colleagues and friends to local television personalities and restaurant employees, and soon it seems that anyone in Wilmington could be capable of murder.

Bear v. Shark - Chris Bachelder 2002-02-19

So it's kind of like a parlor game, then?... The question is apparently of Ancient Eastern extraction.... It seems to be a gut thing. The answer just feels right and then you come up with reasons.... Given a relatively level playing field -- i.e., water deep enough so that a Shark could maneuver proficiently, but shallow enough so that a Bear could stand and operate with its characteristic dexterity -- who would win in a fight between a Bear and a Shark? In this brilliant satire of our media-saturated culture, the sovereign nation of Las Vegas -- the entertainment capital of the world -- is host to Bear v. Shark II. After a disappointing loss in the first matchup between the land and the sea, the bear is back with a vengeance and out for blood. All of America is obsessed with the upcoming spectacle, so tickets are hard to come by. With an essay entitled "Bear v. Shark: A Reason to Live," young Curtis Norman wins a national writing contest and four tickets to the event. The Normans load up their SUV and embark on a road trip to Vegas. As they head cross-country, the family is besieged by a dizzying barrage of voices: television and radio personalities, public service announcements, bear and shark pundits, Freudians, theologians, and self-published authors, in addition to the Bear v. Shark fanatics, cultists, and resisters they meet at roadside gas stations and restaurants. Overwhelmed by factoids, statistics, and ten-second debates, the Normans -- along with the rest of country -- can't seem to get their facts straight, much less figure out a way to actually communicate with one another. Sound bites and verbal tics predominate; misheard, misunderstood, and just plain mistaken information is absorbed, mangled, and regurgitated to hilarious effect; and the most inane subjects -- from the disappearance of Dutch culture to the Shakespearean bias toward the bear -- are vigorously and obsessively

debated. These meaningless exchanges of misinformation leave Mr. Norman disenchanted, world-weary, and ambivalent about the impending show, but the family eventually makes it to Vegas for an apocalyptic and surprisingly emotional ending. Written in quick, commercial-like segments that mirror the media it satirizes, Chris Bachelder's debut is a fiercely funny, razor-sharp novel about the odd intersection of zealotry and trivia, about the barriers to human connection in a society that values entertainment above all else. Through a clever act of novelistic subterfuge, Bachelder makes us laugh at our penchant for absurd and useless information while drawing us into a dazzling spectacle of his own imagination.

Shark Man - Riley Elliott 2014-11-07

The adventures of a shark scientist and his mission to change our perception of New Zealand's most feared and misunderstood predator. Riley Elliott is a surfer, spear-fisherman and shark scientist from the Waikato, currently writing a PhD at Auckland University. He's also on a mission to share his fascination with sharks, raise the profile of their dwindling numbers and question the legitimacy of shark-finning in our waters. Riley's passion for sharks started while he was working at the Oceans Research Great White Shark Station in South Africa, where he learned to free-dive with sharks beyond the cage. Upon his return to New Zealand, Riley began research for his PhD, and in the process uncovered some alarming trends. Riley Elliott is making it his mission to educate New Zealanders about the over-exploitation of sharks in our waters, particularly the controversial practice of shark-finning, and how it affects the ocean ecosystem. In the process he's becoming New Zealand's most popular expert on shark species, and a go-to commentator about our increasing encounters with this deadly ocean predator. Shark Man is Riley's story, from his time learning to scuba dive and spearfish, his early fascination with sharks while surfing life at Raglan, his first encounters with great whites in South Africa and learning to safely free-dive to his study of New Zealand sharks species and the making of the TVNZ television documentary series 'Shark Man'. The book also has information about New Zealand's prevalent shark species - where they live, how they hunt, and their interaction with humans, with fascinating new insights and little-known facts.

Global Perspectives on the Biology and Life History of the White Shark - Michael L. Domeier 2012-02-03

Inspired by the International White Shark Symposium in 2010, *Global Perspectives on the Biology and Life History of the White Shark* incorporates the most important contemporary research findings into a single peer-reviewed book. Within the chapters one can find new insights into a vast range of topics, such as behavior, physiology, migration patterns, habitat preferences, daily activity patterns, molecular genetics, reproductive biology and new research methods. The book also delves into population monitoring and policy options for managers and researchers.

Shark Drunk - Morten Stoksnes 2017-06-27

A salty story of friendship, adventure, and the explosive life that teems beneath the ocean The Lofoten archipelago, just North of the Arctic Circle, is a place of unsurpassed beauty—the skyline spikes with dramatic peaks; the radiant greens and purples of the Northern Lights follow summers where the sun never sets. It's a place of small villages, where the art of fishing, though evolving, is still practiced in traditional ways. Beneath the great depths surrounding these islands lurks the infamous Greenland shark. At twenty-four feet in length and weighing more than a ton, it is truly a beast to behold. But the shark is not known just for its size: Its meat contains a toxin that, when consumed, has been known to make people drunk and hallucinatory. *Shark Drunk* is the true story of two friends, the author and the eccentric artist Hugo Aasjord, as they embark on a wild pursuit of the famed creature—all from a tiny rubber boat. Together they tackle existential questions and encounter the world's most powerful maelstrom as they attempt to understand the ocean from every possible angle, drawing on poetry, science, history,

ecology, mythology, and their own—sometimes intoxicated—observations, meanwhile pursuing the elusive Greenland shark. By turns thrilling, wise, and hilarious, Shark Drunk is a celebration of adventure, marine life, and, above all, friendship.
