**Química. Equilibrios químicos** - Jesús Sanz Asensio 2014-04-02

Libro para adquirir el fundamento de los mecanismos teórico-prácticos de los equilibrios químicos que tienen lugar en disoluciones acuosas. Se inicia con una presentación de los compuestos químicos, de las reacciones químicas y las ecuaciones químicas con los conceptos estequiométricos necesarios para exponer la disociación electrolítica, sus consecuencias y las diversas formas químicas de cuantificar los compuestos en estado puro y en disolución, teniendo en cuenta su disociación y con la utilización de cifras significativas, explicando una estadística básica para la obtención de resultados. Lo fundamental de la obra comienza con un tema sobre el Equilibrio Químico, con los conceptos concentración y actividad, que antecede a los temas en los cuales

se exponen los aspectos teórico-prácticos de los Equilibrios Químicos: Ácido-Base, Formación de Complejos (Complejación), Oxidación-Reducción (Redox) con un inicio a la Electroquímica y Equilibrios Heterogéneos con la formación/solubilidad de compuestos poco solubles incluyendo Fenómenos de Superficie con sus conceptos básicos de Absorción y Adsorción. Se finaliza con un tema de los principales Equilibrios Concurrentes. En todos los temas se presentan las representaciones gráficas más importantes y ejercicios prácticos. Finaliza el libro con un índice general de materias y conceptos químicos con sus apartados de localización, con una bibliografía y con un índice exhaustivo de los apartados incluidos en todos los temas. Los aspectos teórico-prácticos presentados se complementan paralelamente con numerosos ejercicios teórico-prácticos, resueltos en sus apartados o en un anexo, que permiten facilitar el estudio de los planteamientos teóricos y se completan con una

exposición de prácticas de laboratorio que son aplicaciones reales de los distintos equilibrios químicos. Se adjunta un CD con archivos en PowerPoint de las representaciones gráficas que se incluyen en cada uno de los temas y con unos archivos en Excel que facilitan la resolución de las ecuaciones de los ejercicios y la exposición de los resultados de las prácticas de laboratorio seleccionadas aplicando la estadística básica para obtener un resultado final. También contiene un archivo con una hoja para el cálculo exacto de pesos fórmula o pesos moleculares.

*Nursing Outcomes Classification (NOC)* - Marion Johnson 2000

This second edition of the Nursing Outcomes Classification (NOC) contains 260 outcomes. Each outcome includes a label name; a definition; a set of indicators that describe specific patient, caregiver, family, or community states related to the outcome; a 5point Likert-type

measurement scale; and selected references used in the development of the outcome. Although we encourage the use of the indicators and measurement scale associated with the outcomes, the goal of the research team is to standardize the label name and definition for each outcome, which assist nurses in evaluating and quantifying patient status in relation to a particular outcome. *Chemical Demonstrations* - Bassam Z.

Shakhashiri 1985

The demonstrations capture interest, teach, inform, fascinate, amaze, and perhaps, most importantly, involve students in chemistry. Nowhere else will you find books that answer, "How come it happens? . . . Is it safe? . . . What do I do with all the stuff when the demo is over?"

Shakhashiri and his collaborators offer 282 chemical demonstrations arranged in 11 chapters. Each demonstration includes seven sections: a brief summary, a materials list, a step-by-step account of procedures to be used, an explanation of the hazards involved, information on how to store or dispose of the chemicals used, a discussion of the phenomena displayed and principles illustrated by the demonstration, and a list of references.

**Development with Identity** - Robert E. Rhoades 2006

Throughout Latin America, indigenous peoples are demanding that development must address local priorities, including ethnic identity. Simultaneously, sustainability scientists need to conduct place-based research on the interaction between environment and society that will have global relevance. This book reports on a 6 year interdisciplinary research project on natural resource management in Cotacachi, Ecuador, where scientists and indigenous groups learnt to seek common ground. The book discusses how local people and the environment have engaged each other over time to create contemporary

Andean landscapes. It also explores human-environment interaction in relation to biodiversity, soils and water, and equitable development. This book will be of significant interest to sociologists, anthropologists, economists and sustainability scientists researching environment and agriculture in rural communities.

### **Principles of Bioinorganic Chemistry -**

Stephen J. Lippard 1994

As one of the most dynamic fields in contemporary science, bioinorganic chemistry lies at a natural juncture between chemistry, biology, and medicine. This rapidly expanding field probes fascinating questions about the uses of metal ions in nature. Respiration, metabolism, photosynthesis, gene regulation, and nerve impulse transmission are a few of the many natural processes that require metal ions, and new systems are continually being discovered. The use of unnatural metals - which have been introduced into human biology as diagnostic probes and drugs - is another active area of tremendous medical significance. This introductory text, written by two pioneering researchers, is destined to become a landmark

in the field of bioinorganic chemistry through its organized unification of key topics. Accessible to undergraduates, the book provides necessary background information on coordination chemistry, biochemistry, and physical methods before delving into topics that are central to the field: What metals are chosen and how are they taken up by cells? How are the concentrations of metals controlled and utilized in cells? How do metals bind to and fold biomolecules? What principles govern electron transfer and substrate binding and activation reactions? How do proteins fine-tune the properties of metals for specific functions? For each topic discussed, fundamentals are identified and then clarified through selected examples. An extraordinarily readable writing style combines with chapter-opening principles, study problems, and beautifully rendered two-color illustrations to make this book an ideal choice for instructors, students, and researchers in the chemical, biological, and medical communities.

Este libro, es junto con el Manual de laboratorio, fruto directo del programa CHEM publicado también por esta Editorial. Como una de las versiones autorizadas del citado proyecto, esta obra refleja todo el esfuerzo y dedicación del equipo original del proyecto CHEM. El título Química. Experimentos y teorías responde perfectamente bien a la idea básica de este libro; en él se exponen cuidadosamente y además se

utilizan a lo largo del mismo, todos los pasos por los cuales transcurre el llamado método científico. Las observaciones experimentales y las medidas dan lugar al desarrollo de los principios teóricos que las unifican y que, más tarde, se utilizan para relacionar e interpretar diversos fenómenos.
