*Maritime Logistics* - Dong-Wook Song 2015-04-03

Globalisation and the rapid increase in world trade in the past decade have contributed to greater demand for international transport and logistics and, consequently, the expansion of the maritime industry. The dramatic changes in the mode of world trade and cargo transportation make it more important than ever to have a clear understanding of the way in which freight is transported by sea and the role of ports in this exchange. At the cutting edge in its assessment of the industry, *Maritime Logistics* covers the whole scope of maritime logistics and examines latest logistical developments within the port and shipping industry. With a range of new international contributors, this new edition has been thoroughly revised and updated. There are new chapters on port centric logistics, hinterland logistics and global supply chains, maritime transport and logistics as a trade facilitator, and future trends and developments. Written by a team of international experts with over fifty years' experience in the field, *Maritime Logistics* provides a truly global perspective. The book covers everything that students of logistics, as well as those working within the industry, need to know about maritime logistics, including shipping lines, containers, tankers, dry bulk, port-centric logistics, and much more.

*International Airline Alliances : EC Competition Law/US Antitrust Law and International Air Transport* - Angela Cheng-Jui Lu 2003-01-01

This new study takes a keen look at the problems facing the international community due to conflicts arising from applications of varying competition laws by different competition authorities to international airline alliances. As a result of privatisation, deregulation, liberalisation and globalisation, international air carriers form alliances with one another in order to cope with growing competition in the international air transport market. This book clearly provides an introduction to the background to and origin of airline alliances, different models of alliances and the related anti-competitive practices resulting from existing international airline alliances. The potential anti-competitive practices resulting from these cross-border alliances trigger a great deal of concern from various competition authorities. Thus, this study goes on to provide a detailed analysis regarding the relevant EC competition law and US antitrust law and their applications to alliance activities. The comparison of different applications of EC competition law and US antitrust law to international airline alliances provides leading research results first-hand. In the conclusion, the essential elements regarding establishing a level playing field in the international air transport market are identified and the author provides possible solutions for the harmonisation of different applications of competition law to international airline alliances.

Importing Into the United States - Border Protection U S Customs and 2015-10-12

This edition of Importing Into the United States contains material

pursuant to the Trade Act of 2002 and the Customs Modernization Act, commonly referred to as the Mod Act. Importing Into the United States provides wide-ranging information about the importing process and import requirements. We have made every effort to include essential requirements, but it is not possible for a book this size to cover all import laws and regulations. Also, this publication does not supersede or modify any provision of those laws and regulations. Legislative and administrative changes are always under consideration and can occur at any time. Quota limitations on commodities are also subject to change. Therefore, reliance solely on the information in this book may not meet the "reasonable care" standard required of importers.

**Airline Operations and Management** - Gerald N. Cook 2017-02-03  
Airline Operations and Management: A Management Textbook is a survey of the airline industry, mostly from a managerial perspective. It integrates and applies the fundamentals of several management disciplines, particularly economics, operations, marketing and finance, in developing the overview of the industry. The focus is on tactical, rather than strategic, management that is specialized or unique to the airline industry. The primary audiences for this textbook are both senior and graduate students of airline management, but it should also be useful to entry and junior level airline managers and professionals seeking to expand their knowledge of the industry beyond their own functional area.
