**NMR-Spectroscopy: Modern Spectral Analysis** - Ursula Weber 2008-11-21  
The state-of-the-art in NMR spectral analysis.

This interactive tutorial provides readers with a comprehensive range of software tools and techniques, as well as the necessary theoretical

knowledge required to analyze their spectra and obtain the correct NMR parameters. Modern Spectral Analysis provides expert guidance, by presenting efficient strategies to extract NMR parameters from measured spectra. A database of selected spectra and modern, powerful WIN-NMR software designed by Bruker are provided on the enclosed CD-ROM. The programs provided are 1 D WIN-NMR, WIN-DAISY, WIN-DR and WIN-DYNAMICS, and direct data exchange between all these programs is possible. Readers are shown how they can obtain maximum structural information from their 1 D NMR spectra with time-saving computer assistance. Practical problems that can occur and their solutions are discussed at length using clear, easy-to-follow examples. Both homo- and heteronuclear and first- and second-order spin systems are demonstrated. Moreover, relaxation analysis, nuclear Overhauser effects and magnetic site exchange are all covered in this hands-on guide to NMR spectral analysis.

**Air Pollution Control Equipment Selection Guide** - Kenneth C. Schiffner 2002-06-26

The selection of air pollution control apparatus can be a daunting task even for experienced pollution control professionals. The Air Pollution Control Equipment Selection Guide eases the burden by providing extensive information on the best equipment available for any air pollution control problem. Instead of endorsing one technology over another, the author provides general information so that you can decide on the proper technology to use for any given application. The book offers ample introductory information including a helpful "Air Pollution 101" chapter that reviews the basics of air pollution control. The text is divided into sections that are organized by the primary technology employed, i.e., Quenching, Cooling, Particulate Removal, Gas Absorption, etc. This structure enables you to jump from section to section and quickly compare technologies. Each section defines the type of gas cleaning device,

the basic physical forces used in it, its common sizes, and its most common uses. Many air pollution control problems are not solved with one type of device, but through using a variety of designs synergistically. To make this task easier, the author includes sections on each of these devices and notes where they are commonly used in concert with other equipment. Wherever possible, the text includes current photographs or drawings of typical equipment within that device type. Written in an easy to read style, Air Pollution Control Equipment Selection Guide serves as a technologically accurate reference that will facilitate the selection of air pollution control equipment for any operation.

The Chateau - Penelope Sky 2020-10-27

I've been taking care of my little sister for a long time. When Mom was gone, she suddenly became my responsibility. The best years of my life were spent being a caretaker to someone else...with no one to take care of me. So I moved to Paris for my study-abroad program and ended

up staying, getting a French Literature degree, studying the classics while sipping the best wine I'd ever had. My sister never makes the best decisions, always makes messes to clean up, and it's finally time for me to have my own life. But when she comes to Paris for a visit...she brings trouble with her. She gets herself into a bad situation, and of course, I come to her rescue...like I always do. Now we're in a labor camp in the middle of nowhere, surrounded by endless snow and mountains, processing drugs for a group of men that never show their faces. There's no chance of escape in this wilderness. Except for my guard. He's not a saint, but he's the only man that's kind to me. He knows I want to escape, but he never reports me. When I've had a hard day, he brings me extra things to make my life easier. He tells me not to run because I'll never make it...but he brings me little hidden tools...as if he's giving me the means. Like he wants me to be free.

*An Aid to Radiology for the MRCP* - K. K. Ray  
2000-04-17

Co-written by the author of the best-seller *An Aid to the MRCP Short Cases* this new, systematically organized text concentrates on examples that are frequently examined in the MRCP Part 2 written examination - saving

candidates time during revision and enabling them to concentrate on weaker specialities. By including high quality images and labelling abnormal findings on the original images, the authors enable the reader to feel confident about recognizing specific radiological abnormalities, instead of guessing where the abnormality lies.

In order to avoid guessing, the reader is asked to describe the radiological findings in each case.

In the Question section, each page is dedicated to an X-ray and sample questions. An Answer section, with further radiographs to highlight variations and details, is given at the end of the book to provide background knowledge.

*Adolescents and the Media* - Victor C.

Strasburger 1995-03-16

"Victor C. Strasburger has given us a clear, concise summary of a massive amount of information on a very important subject. This slim volume should be read by every professional who cares for and about adolescents." --Michael B. Rothenberg, M.D., Professor Emeritus, University of Washington School of Medicine "There is much of value here. An opening chapter provides an excellent overview of how mass communication research is conducted, and subsequent chapters focus on current findings regarding the effects of televised portrayals of violence, sex, and the consumption of alcohol, tobacco, and food on adolescents. . . . Comprehensive and well-

referenced bibliography. . . . Adolescents and the Media is recommended for a general readership and for undergraduate collections in media studies, health care, and education." --Choice Violent television programs, gory video games, print tobacco advertising, TV beer commercials, and sexually suggestive music videos. How do these and other forms of popular media affect the thinking, behavior, and health of America's teenagers? Adolescents and the Media provides a state-of-the-art review of research findings on the influence of such media as television, movies, video games, print advertising, rock music, and music videos on adolescents. Beginning from a theoretical and conceptual background of adolescent development, the book covers findings on violence, sexual activity, substance abuse, and eating disorders and makes a clear case that media play a role in diverse facets of at-risk behavior and adjustment. It concludes with recommended strategies for preventing adverse media effects

on youths. Mental health professionals and policy makers, primary care physicians and nurses, educators, and almost anyone who works with and cares about adolescents, will find this an eye-opening work.

[A Guide to Starting Your Hedge Fund](#) - Erik Serrano Berntsen 2015-03-03

Successful hedge fund investing begins with well-informed strategy. A Guide to Starting Your Hedge Fund is a practical, definitive "how-to" guide, designed to help managers design and launch their own funds, and to help investors select and diligence new funds. The first book to examine the practical aspects of setting up and operating funds with a focus on energy commodity markets, this book scrutinises the due diligence process and comprehensively reviews the opportunities and risks of all

energy commodity markets as hedge fund investments. Extensive planning and strategy advice prove invaluable to prospective fund managers and investors alike, and detailed discussion of the markets' constraints help inform procedural decisions. Readers gain insight into practical matters including legal and commercial structures, due diligence, fund raising, operations, and more, allowing them to construct a concrete investment plan before ever touching a penny. Asset managers are looking to energy commodities to provide attractive uncorrelated - if volatile - returns. These high returns, however, are accompanied by high risk. Few investors have experience evaluating these investment opportunities, and few prospective fund managers understand the market fundamentals and their associated risks. This book provides the answers sorely lacking in hedge fund literature, giving investors and fund managers the background they need to make smarter

decisions. Understand the markets' structures, opportunities, and risks. Develop a comprehensive, well-informed investment strategy. Conduct thorough due diligence with a detailed plan. Examine the practical aspects of fund raising, legal and tax structure, and more. Oil has long been traded by hedge funds, but electricity, the fuels that generate electricity, and the environmental products like emissions allowances and weather derivatives have become the new "hot" investment strategies. These high returns come with higher risk, but *A Guide to Starting Your Hedge Fund* ensures participants have essential information at their disposal.

Beyond simulation and algorithm development, many developers increasingly use MATLAB even for product deployment in computationally heavy fields. This often demands that MATLAB codes run faster by leveraging the distributed parallelism of Graphics Processing Units (GPUs). While MATLAB successfully provides high-level functions as a simulation tool for rapid prototyping, the underlying details and knowledge needed for utilizing GPUs make MATLAB users hesitate to step into it. *Accelerating MATLAB with GPUs* offers a primer on bridging this gap. Starting with the basics, setting up MATLAB for CUDA (in Windows, Linux and Mac OS X) and profiling, it then guides users through advanced topics such as CUDA libraries. The authors share their experience developing algorithms using

MATLAB, C++ and GPUs for huge datasets, modifying MATLAB codes to better utilize the computational power of GPUs, and integrating them into commercial software products. Throughout the book, they demonstrate many example codes that can be used as templates of C-MEX and CUDA codes for readers' projects. Download example codes from the publisher's website:

Shows how to accelerate MATLAB codes through the GPU for parallel processing, with minimal hardware knowledge Explains the related background on hardware, architecture and programming for ease of use Provides simple worked examples of MATLAB and CUDA C codes as well as templates that can be reused in real-world projects

**A Heart for the Work** - Claire L. Wendland 2010-09-15  
Burnout is common among doctors in the West, so one might assume that a medical career in Malawi, one of the poorest countries in the

world, would place far greater strain on the idealism that drives many doctors. But, as *A Heart for the Work* makes clear, Malawian medical students learn to confront poverty creatively, experiencing fatigue and frustration but also joy and commitment on their way to becoming physicians. The first ethnography of medical training in the global South, Claire L. Wendland's book is a moving and perceptive look at medicine in a world where the transnational movement of people and ideas creates both devastation and possibility. Wendland, a physician anthropologist, conducted extensive interviews and worked in wards, clinics, and operating theaters alongside the student doctors whose stories she relates. From the relative calm of Malawi's College of Medicine to the turbulence of training at hospitals with gravely ill patients and dramatically inadequate supplies, staff, and technology, Wendland's work reveals the way these young doctors engage the contradictions

of their circumstances, shedding new light on debates about the effects of medical training, the impact of traditional healing, and the purposes of medicine.

**A Short Guide to Risk Appetite** - David Hillson 2017-03-02

How much risk should we take? A Short Guide to Risk Appetite sets out to help all those who need to decide how much risk can be taken in a particular risky and important situation. David Hillson and Ruth Murray-Webster introduce the RARA Model to explain the complementary and central roles of Risk Appetite and Risk Attitude, and along the way they show how other risk-related concepts fit in. Risk thresholds are the external expression of inherent risk appetite, and the challenge is how to set the right thresholds. By progressively deconstructing the RARA Model, the authors show that the essential control step is our ability to choose an appropriate risk attitude. The book contains practical guidance to setting risk thresholds that take proper account of the influences of organisational risk culture and the individual risk preferences of key stakeholders. Alongside

this, individuals and organisations need to choose the risk attitude that will optimise their chances of achieving the desired objectives.
