Custom Kicks - Kim Smits

2008-05-15

Customizing is hot. Everything can be customized: from pimped cars to retro furniture. This major trend is especially popular in footwear.

Customizing your own shoes is a way of stepping out of the crowd, of showing your personality. Just about every sneaker brand has found a way to put street art into their products; rain boots have never

been more hip; and there are even customize festivals and exhibitions. By inviting 150 artists and illustrators to show/create customized shoes the book will appeal not only to sneaker freaks, fashion fetishists, and trend watchers, but also to the graphic design and art audience. The main focus is on the artwork but the text examines the trend and asks: How did it start? What materials do the artists use? There are also tips and tricks on how to create your very own unique shoes.

These are the women who snitched on Gaddafi, marched on Tahrir Square, defended the bloody borders of Kurdistan, and became the heroines of our century's greatest struggle. But who are they? What led them to revolution? And where do they go from here? *The Singing Stones* is a fearless exploration of women and the Arab Spring.

Making Conversation - Fred Dust 2020-12-01

A former Senior Partner and Global Managing Director at the legendary design firm IDEO shows how to design

conversations and meetings that are creative and impactful. Conversations are one of the most fundamental means of communicating we have as humans. At their best, conversations are unconstrained, authentic and open—two or more people sharing thoughts and ideas in a way that bridges our individual experiences, achieves a common goal. At their worst, they foster misunderstanding, frustration and obscure our real intentions. How often do you walk away from a conversation feeling really heard? That it moved the people in it forward in some important way? You're not alone. In his practice as a designer, Fred Dust began to approach conversations differently. After years of trying to broker communication between colleagues and clients, he came to believe there had to be a way to design the art of conversation itself with intention and purpose, but still artful and playful. Making Conversation codifies what he learned and

outlines the four elements essential to successful exchanges: Commitment, Creative Listening, Clarity, and Context. Taken together, these four elements form a set of resources anyone can use to be more deliberate and purposeful in making conversations work.

Economic and Monetary Union: Implications for National Policy-Makers -

Klaus Gretschmann 1993-06-24
The Heads of State and Government at the European Council meeting in Maastricht definitely decided to embark upon the creation of Economic and Monetary Union by, at the latest, the beginning of 1999, and in doing so opted for a relatively short but difficult journey that should bring the European Community all the benefits one could expect from

such an undertaking. However, the question still remains of how economic and monetary union will really affect the day-to-day policy making of the national civil servants involved, particularly in the areas of monetary and fiscal policies.

Time Series Econometrics - Pierre Perron 2019-04-18

Volume 1 covers statistical methods related to unit roots, trend breaks and their interplay. Testing for unit roots has been a topic of wide

interest and the author was at the forefront of this research. The book covers important topics such as the Phillips-Perron unit root test and theoretical analyses about their properties, how this and other tests could be improved, and ingredients needed to achieve better tests and the proposal of a new class of tests. Also included are theoretical studies related to time series models with unit roots and the effect of span versus sampling interval on the power of the tests. Moreover, this book deals with the issue of trend breaks and their effect on unit root tests. This research agenda fostered by the author showed that trend breaks and unit roots can easily be confused. Hence, the need for new testing procedures, which are covered. Volume 2 is about statistical methods related to structural change in time series models. The approach adopted is off-line whereby one wants to test for structural change using a historical dataset and perform hypothesis testing. A distinctive feature is

the allowance for multiple structural changes. The methods discussed have, and continue to be, applied in a variety of fields including economics, finance, life science, physics and climate change. The articles included address issues of estimation, testing and/or inference in a variety of models: short-memory regressors and errors, trends with integrated and/or stationary errors, autoregressions, cointegrated models, multivariate systems of equations, endogenous regressors, long-memory series, among others. Other issues covered include the problems of non-monotonic power and the pitfalls of adopting a local asymptotic framework. Empirical analyses are provided for the US real interest rate, the US GDP, the volatility of asset returns and climate change.
