Each chapter will take you one step closer to becoming an expert in RWD. Right from the start your skills will be pushed as we introduce you to the power of Sass, the CSS preprocessor, to increase the speed of writing repetitive CSS tasks. We'll then use simple but meaningful HTML examples, and add ARIA roles to increase accessibility. We'll also cover when desktop-first or mobile-

first approaches are ideal, and strategies to implement a mobile-first approach in your HTML builds. After this we will learn how to use an easily scalable CSS grid or, if you prefer, how to use Flexbox instead. We also cover how to implement images and video in both responsive and responsible ways. Finally, we build a solid and elegant typographic scale, and make sure your messages and communications display correctly with responsive emails. Style and approach Designing and developing for the web should be fun, and that's the tone used in the book. This book is written in a step-by-step format with clean-cut examples. You will also find tips and notes all over the book to help clarify those small and simple details most books and tutorials assume you already know.

What You Will Learn Master Sass and Compass features Familiarize yourself with CSS and HTML concepts that are vital for a good Sass workflow. Build real-world websites focusing on layouts and content aspects Work on a grid system using Compass and Susy Automate your workflow with Gulp Write functions and mixins to leverage the control flow In Detail CSS and Sass add elegance and excellence to the basic language, and consist of a CSS-compatible syntax that allows you to use variables, nested rules, mixins, inline imports, and much more. This book will start with an overview of the features in Sass and Compass, most of which you'll already be familiar; however, this will ensure you know what's expected as the book goes deeper into Sass and Compass. Next you will learn CSS and HTML concepts that are vital to a good Sass workflow. After all, Sass exists to simplify writing CSS, but it won't teach you how to make clean, scalable, reusable CSS. For that, you need to understand some basic concepts of OOCSS, SMACCS, and Atomic Design. Once you've brushed up on the important concepts, it's time to write some Sass. Mainly you'll write a few functions and mixins that really leverage control flow using @if / @else loops and you'll learn how to figure out when and why things are going wrong before they bring you to a stop. Moving further, you'll learn how to use @debug, @warn and @error to properly handle errors. You'll also learn about Gulp and how to use it to automate your workflow and reduce your repetitive tasks. And finally you'll learn about sourcemaps. With sourcemaps, you'll be able to write, debug, and view your Sass and Compass all from within the browser. It'll even LiveReload too! As a bonus, you'll take a look at that funky Flexbox, currently all the rage! You'll learn how powerful and flexible it really is, and how you can use it with Compass. Best of all, it falls back very gracefully indeed! In fact, you'll be able to apply it to any existing project without having to change a line of the original CSS.
