Intelligent Learning Environments and Knowledge Acquisition in Physics - Andree Tiberghien 2012-12-06

The NATO workshop "Knowledge acquisition in the domain of physics and intelligent learning environments" was held in Lyon, France, July 8-12, 1990. A total of 31 researchers from Europe (France, Germany, Greece, Italy, Portugal, and the U. K.), the U. S. A. , and Japan worked together. This proceedings volume contains most of the contributions to the workshop. The papers show clearly the main directions of research in intelligent learning environments. They display a variety of points of view depending on the researcher's own background even when a single domain of teaching, namely physics, is considered. We acknowledge the assistance of Michael Baker, who was responsible for reviewing the English of the contributions. February 1992 Andree Tiberghien Heinz Mandl Table of Contents Introduction 1 1. Learning Electricity and Electronics with Advanced Educational Technology - Michel Caillot 1993-11-03
This volume is based on a NATO Advanced Research Workshop in the Special Programme on Advanced

Educational Technology. The objective of the workshop was to bring together researchers producing software in the field of electricity education, and more generally in physics education, and researchers involved in the connection between cognitive science and the learning of a well defined domain such as electricity. The book is divided into five main parts: - New approaches to teaching electricity: research on the teaching of electricity has shown that traditional presentations should be questioned. - Analogies and models in electricity: teaching experiments based on different models of electricity are presented. - Contextualized electricity: a new field of research studies how adults who work with electricity and electronic devices represent electric phenomena and concepts. - Using computers in electricity teaching: studies show how computers can be used for assessing electricity knowledge and student models of electricity. - Design of learning environments: here interactive learning environments, some of them specially designed for practical work in electronics, are presented.

Research in Science Education in Europe - M. Bandiera 2013-11-11

This volume presents a "photograph" of the state of the art in Science Education Research in Europe as it has emerged from the first ESERA Conference held in Rome in September 1997. The Conference saw the participation of more than 280 researchers from European and some extra European countries distributed as follows U. K. 46 The Netherlands 10 Germany 35 Finland 9 Italy 28 Switzerland 6 Spain 26 Portugal 6 France 18 Israel 5 Sweden Argentina 15 3 Denmark 14 Australia 3 Greece 14 USA 3 Brasil 11 Others 18 Norway TOTAL 11 281 As it can be seen from the table, although the group from U. K. where research in science education has a well established tradition is the most consistent one, quite a large number of researchers has come from Germany and the Scandinavian countries, sign of the increasing attention these countries pay to scientific education at all levels. The presence of researchers from extraeuropean countries has allowed a comparison of experience over a wider basis than the national one. The themes of research, identified a priori by the organizers as important, were: of the Art in Science Education Research (Biology, - The State Chemistry, Physics and Earth Science) - Science Teaching and Learning - Science, Science Teaching and Society - Teachers' Education and its Cultural Components The Scientific Committee of the Conference decided to publish a selection of the papers presented and we accepted the task of the editing.
