Street Performers and Society in Urban Japan, 1600-1900 - Gerald Groemer 2016-01-13

This book presents a thoroughly researched and meticulously documented study of the emergence, development, and demise of music, theatre, recitation, and dance witnessed by the populace on thoroughfares, plazas, and makeshift outdoor performance spaces in Edo/Tokyo. For some three hundred years this city was the centre of such arts, both sacred and secular. This study outlines the nature of the performances, explores the social relations which lay behind them, and reveals vast complexity: an obligation of gift-giving on the part of observers; performers who were often economic migrants fallen on hard times; relations of performance to social class; a class system much more finely gradated than the official four caste system; and institutions of professional organization and registration, enforced by government, with penalties for unregistered performers. The book discusses how performing, witnessing, and rewarding performance were closely bound

up with economy, society and government, how the interaction between various groups related to socio-economic advancement, how the system of street performance reinforced social control, and how the balance between different groups shifted over time.

Carbohydrate Chemistry - N R Williams 2007-10-31

Carbohydrate Chemistry provides review coverage of all publications relevant to the chemistry of monosaccharides and oligosaccharides in a given year. The amount of research in this field appearing in the organic chemical literature is increasing because of the enhanced importance of the subject, especially in areas of medicinal chemistry and biology. In no part of the field is this more apparent than in the synthesis of oligosaccharides required by scientists working in glycobiology. Glycomedicinal chemistry and its reliance on carbohydrate synthesis is now very well established, for example, by the preparation of specific carbohydrate-based antigens, especially cancer-specific oligosaccharides and glycoconjugates. Coverage of topics such as nucleosides, amino-sugars, alditols and cyclitols also covers much research of relevance to biological and medicinal chemistry. Each volume of the series brings together references to all published work in given areas of the subject and serves as a comprehensive database for the active research chemist. Specialist Periodical Reports provide systematic and detailed review coverage in major areas of chemical research. Compiled by teams of leading authorities in the relevant subject areas, the series creates a unique service for the active research chemist, with regular, in-depth accounts of progress in particular fields of chemistry. Subject coverage within different volumes of a given title is similar and publication is on an annual or biennial basis.

Bad Bug Book - Mark Walderhaug 2014-01-14

The Bad Bug Book 2nd Edition, released in 2012, provides current information about the major known agents that cause foodborne

illness. Each chapter in this book is about a pathogen—a bacterium, virus, or parasite—or a natural toxin that can contaminate food and cause illness. The book contains scientific and technical information about the major pathogens that cause these kinds of illnesses. A separate “consumer box” in each chapter provides non-technical information, in everyday language. The boxes describe plainly what can make you sick and, more important, how to prevent it. The information provided in this handbook is abbreviated and general in nature, and is intended for practical use. It is not intended to be a comprehensive scientific or clinical reference. The Bad Bug Book is published by the Center for Food Safety and Applied Nutrition (CFSAN) of the Food and Drug Administration (FDA), U.S. Department of Health and Human Services.

Clans and Genealogy in Ancient Japan - Masanobu Suzuki 2017-02-03

In recent years, there has been a noticeable and enthusiastic increase of interest in Buddhist temples and Shintō shrines in Japan. The legends of these temples and shrines are recorded in many historical manuscripts and these genealogies have such great significance that some of them have been registered as national treasures of Japan. They are indispensable to elucidate the history of these temples and shrines, in addition to the formation process of the ancient Japanese nation. This book provides a comprehensive examination of the genealogies and legends of ancient Japanese clans. It advances the study of ancient Japanese history by utilizing new analytical perspective from not only the well-known historical manuscripts relied upon by previous researchers, but also valuable genealogies and legends that previous researchers largely neglected.

Biodiversity and Education for Sustainable Development - Paula Castro 2016-05-26

This book gathers interdisciplinary reflections from researchers, educators, and other experts on the subject of biodiversity closer to education and learning. The book also highlights its role as an added value to strategic principles for healthy ecosystems and sustainable human development. It promotes critical thinking and foster practices and attitudes for Education for Sustainable Development reconciling education with principles of human behaviour and nature. Readers especially find this book a timely resource in light of the Strategic Plan for Biodiversity 2011–2020, the Aichi Targets, and the new EU biodiversity strategy “Our life insurance, our natural capital: an EU biodiversity strategy to 2020”. Along with the challenge of ecosystems and public health, biodiversity conservation is essential for humanity's continued security and sustainability, as it touches on all aspects of people's lives.

The Royal Navy in World War II - Robert Jackson 1997

When Nazi Germany struck out from her borders in 1939, the untold force and efficiency of its land and air forces cut an unstoppable swath through mainland Europe. It was only at sea that their newfound might was tamed. Hitler's fear of the Royal Navy kept his most lethal ships hidden in bolt-holes, he was frightened to confront the British fleet in battle - an action the Kriegsmarine most probably would have won through superior ships and guns had they confronted their enemy. It was the dogged determination of British seafarers throughout the early part of the war that caused the final demise of the German big-ship fleet and left the U-boat and E-boat to fight Hitler's war at sea. This is the story of how, despite all odds, the RN helped Britain survive during the critical times of the Battle of the Atlantic, the Siege of Malta, the convoys to northern Russia and the D-Day landings. It also tells why their fully-stretched forces could not play the part they wished in the Eastern and Pacific war.

This comprehensive and authoritative reference covers all aspects of the group of disorders collectively known as the lymphoid neoplasms. The reader is taken through a description of its normal cellular origins and the molecular genetic abnormalities that can lead to this group of conditions, a section of the book that has been considerably strengthened for this third edition, to the environmental factors that may be relevant to disease development, and, finally, to the pragmatic aspects of disease management. The authors synthesise for the reader aspects of current knowledge and likely future developments, and direct them to the appropriate resources should they wish to pursue particular avenues of scientific or literature research.

Frontiers in Catecholamine Research - Earl Usdin 2014-05-18

Frontiers in Catecholamine Research is a collection of papers presented at the Third International Catecholamine Symposium, held at the University of Strasbourg, Strasbourg, France, on May 20-25, 1973. This

book is organized into nine parts encompassing 205 chapters. The text begins with a discussion on clinically and experimentally used drugs that have been developed or whose mechanism of action has been clarified through monoamine research. Parts II and III deal with enzymes related to catecholamine studies, their properties, regulation, genetics, mechanism of action, and localization. Parts IV and V examine the concepts of synaptic dynamics of brain regulators and the isolation, characterization, methods of analysis, and mechanism of action of catecholamines. Part VI focuses on the complexities that surround the extrapolation of catecholamine function into the realms of electrophysiology and behavior. Part VII discusses the metabolism, behavioral, neurological, and physiological effects of amphetamine and other drugs of abuse. The concluding parts describe the role of catecholamine and its metabolism in neurologic diseases, such as schizophrenia.

Conservation for the Anthropocene Ocean - Phillip S. Levin

2017-06-01

Conservation for the Anthropocene Ocean: Interdisciplinary Science in Support of Nature and People emphasizes strategies to better connect the practice of marine conservation with the needs and priorities of a growing global human population. It conceptualizes nature and people as part of shared ecosystems, with interdisciplinary methodologies and science-based applications for coupled sustainability. A central challenge facing conservation is the development of practical means for addressing the interconnectedness of ecosystem health and human well-being, advancing the fundamental interdisciplinary science that underlies conservation practice, and implementing this science in decisions to manage, preserve, and restore ocean ecosystems. Though humans have intentionally and unintentionally reshaped their environments for thousands of years, the scale and scope of human influence upon the oceans in the Anthropocene is unprecedented. Ocean science has increased our knowledge of the threats and impacts to ecological integrity, yet the unique scale and scope of changes increases uncertainty about responses of dynamic socio-ecological systems. Thus,

to understand and protect the biodiversity of the ocean and ameliorate the negative impacts of ocean change on people, it is critical to understand human beliefs, values, behaviors, and impacts. Conversely, on a human-dominated planet, it is impossible to understand and address human well-being and chart a course for sustainable use of the oceans without understanding the implications of environmental change for human societies that depend on marine ecosystems and resources. This work therefore presents a timely, needed, and interdisciplinary approach to the conservation of our oceans. Helps marine conservation scientists apply principles from oceanography, ecology, anthropology, economics, political science, and other natural and social sciences to manage and preserve marine biodiversity Facilitates understanding of how and why social and environmental processes are coupled in the quest to achieve healthy and sustainable oceans Uses a combination of expository material, practical approaches, and forward-looking theoretical discussions to enhance value for readers as they consider conservation research, management and planning

Biodiversity Monitoring and Conservation - Ben Collen 2013-02-14

As the impacts of anthropogenic activities increase in both magnitude and extent, biodiversity is coming under increasing pressure. Scientists and policy makers are frequently hampered by a lack of information on biological systems, particularly information relating to long-term trends. Such information is crucial to developing an understanding as to how biodiversity may respond to global environmental change. Knowledge gaps make it very difficult to develop effective policies and legislation to reduce and reverse biodiversity loss. This book explores the gap between global commitments to biodiversity conservation, and local action to track biodiversity change and implement conservation action. High profile international political commitments to improve biodiversity conservation, such as the targets set by the Convention on Biological Diversity, require innovative and rapid responses from both science and policy. This multi-disciplinary perspective highlights barriers to conservation and offers novel solutions to evaluating trends in biodiversity at multiple scales.
