Twelve Years a Slave - Solomon Northup 2021-01-01

"Having been born a freeman, and for more than thirty years enjoyed the blessings of liberty in a free State—and having at the end of that time been kidnapped and sold into Slavery, where I remained, until happily rescued in the month of January, 1853, after a bondage of twelve years—it has been suggested that an account of my life and fortunes would not be uninteresting to the public." -an excerpt

Accelerating Climate Action Refocusing Policies through a Well-being Lens - OECD 2021-01-09

This report builds on the OECD Well-being Framework and applies a new perspective that analyses synergies and trade-offs between climate change mitigation and broader goals such as health, education, jobs, as well as wider environmental quality and the resources needed to sustain our livelihoods through time. This report takes an explicitly political economy approach to the low-emissions transitions needed across five economic sectors (electricity, heavy industry, residential, surface transport, and agriculture) that are responsible for more than 60% of global greenhouse gas emissions.

The Choice Factory - Richard Shotton 2018-02-12

Before you can influence decisions, you need to understand what drives them. In *The Choice Factory*, Richard Shotton sets out to help you learn. By observing a typical day of decision-making, from trivial food choices to significant work-place moves, he investigates how our behaviour is shaped by psychological shortcuts. With a clear focus on the marketing potential of knowing what makes us tick, Shotton has drawn on evidence from academia, real-life ad campaigns and his own original research. *The Choice Factory* is written in an entertaining and highly-accessible format, with 25 short chapters, each addressing a cognitive bias and outlining simple ways to apply it to your own marketing challenges. Supporting his discussion, Shotton adds insights from new interviews with some of the smartest thinkers in advertising, including Rory Sutherland, Lucy Jameson and Mark Earls. From priming to the pratfall effect, charm pricing to the curse of knowledge, the science of behavioural economics has never been easier to apply to marketing. *The Choice Factory* is the new advertising essential.

Achtung-Panzer! - Heinz Guderian 1995

This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

The Hidden History of Coined Words - Ralph Keyes 2021

"How do words get coined? That question is explored in Ralph Keyes's latest book, *The Hidden History of Coined Words*. Based on meticulous research, Keyes has determined that successful neologisms are as likely to be created by chance as by intention. A remarkable number of new words were coined whimsically, he's discovered, to taunt, even to prank.

Knickers resulted from a hoax, big bang from an insult. Wisecracking produced software, crowdsource, and blog. More than a few neologisms weren't even coined intentionally: they resulted from happy accidents such as typos, mistranslations, and misheard words like bigly and buttonhole, or from an unintended coinage such as Isaac Asimov's robotics. Many of the word coiners Keyes writes about come from unlikely quarters. Neologizers (a Thomas Jefferson coinage) include not just learned scholars and literary lions but cartoonists, columnists, children's authors, and children as well. Wimp, Keyes tells us, originated with an early 20th century book series on The Wymps, goop from a series about The Goops, and nerd from a book by Dr. Seuss. Competing claims to have coined terms like gonzo, mojo, and booty call are assessed, as is epic battles fought between new word partisans, and those who think we have enough words already. A concluding chapter offers pointers on how to coin a word of one's own. Written in a reader-friendly manner, *The Hidden History of Coined Words* will appeal not just to word lovers but history buffs, trivia contesters, and anyone at all who is interested in a well-informed good read"--

Extreme Events - Malcolm Kemp 2011-10-04

Taking due account of extreme events when constructing portfolios of assets or liabilities is a key discipline for market professionals. Extreme

events are a fact of life in how markets operate. In *Extreme Events: Robust Portfolio Construction in the Presence of Fat Tails*, leading expert Malcolm Kemp shows readers how to analyse market data to uncover fat-tailed behaviour, how to incorporate expert judgement in the handling of such information, and how to refine portfolio construction methodologies to make portfolios less vulnerable to extreme events or to benefit more from them. This is the only text that combines a comprehensive treatment of modern risk budgeting and portfolio construction techniques with the specific refinements needed for them to handle extreme events. It explains in a logical sequence what constitutes fat-tailed behaviour and why it arises, how we can analyse such behaviour, at aggregate, sector or instrument level, and how we can then take advantage of this analysis. Along the way, it provides a rigorous, comprehensive and clear development of traditional portfolio construction methodologies applicable if fat-tails are absent. It then explains how to refine these methodologies to accommodate real world behaviour. Throughout, the book highlights the importance of expert opinion, showing that even the most data-centric portfolio construction approaches ultimately depend on practitioner assumptions about how the world might behave. The book includes: Key concepts and methods involved in analysing extreme events A comprehensive treatment of mean-variance investing, Bayesian methods, market consistent approaches, risk budgeting, and their application to manager and instrument selection A systematic development of the refinements needed to traditional portfolio construction methodologies to cater for fat-tailed behaviour Latest developments in stress testing and back testing methodologies A strong focus on the practical implementation challenges that can arise at each step in the process and on how to overcome these challenges "Understanding how to model and analyse the risk of extreme events is a crucial part of the risk management process. This book provides a set of techniques that allow practitioners to do this comprehensively." Paul Sweeting, Professor of Actuarial Science, University of Kent "How can the likeliness of crises affect the construction of portfolios? This question is highly topical in times where we still have to digest the last financial collapse. Malcolm Kemp gives the answer. His book is highly recommended to experts as well as to students in the financial field." Christoph Krischanitz, President Actuarial Association of Austria, Chairman WG "Market Consistency" of Groupe Consultatif
