**Geriatric Medicine** - Gideon Caplan 2014-07-01

Geriatric medicine is one of the youngest medical specialities in Australia but is also one of the fastest growing. Geriatric medicine offers a more holistic approach to patient care than organ-based internal-medicine sub-specialities. Patient-centred interventions aim to allow the patient to function optimally. This textbook has been designed to inspire and inform students of geriatric medicine about the science and art of aged care. The book is structured to follow how geriatric-medicine clinicians approach patients who present with geriatric syndromes and must be assisted by systems of care. In an introductory part, overviews are provided of the biology of ageing, comprehensive geriatric assessment (the cornerstone of geriatric-medicine practice), multidisciplinary teamwork, and community services for older people in Australia. In the second part of the book, over 13 chapters, detailed coverage is provided of the geriatric syndromes, the so-called 'geriatric giants', immobility, incontinence, instability, and impaired intellect. In the third part of the book, over 10 chapters, 'Care in context' - care of older people in general practice and in residential aged care facilities, rehabilitation, acute and post-acute care, end-of-life issues, legal aspects of geriatric medicine, for example - is the focus; geriatric medicine is placed within the Australian health-care system. Individual chapters are written by specialist contributors. Case studies illustrate key points about assessment and management. Inclusion of three poems, by H W Longfellow, W B Yeats, and Dylan Thomas, will enable readers to 'feel the heart within geriatric medicine'. Australasian medical students, junior hospital doctors working in geriatric medicine, and other members of aged-care teams (specialist nurses, physiotherapists, occupational therapists, social workers, etc.), will find in this book a succinct, readable, and authoritative introduction to the principles and practice of geriatric medicine.

**Retooling for an Aging America** - Institute of Medicine 2008-08-27

As the first of the nation's 78 million baby boomers begin reaching age 65 in 2011, they will face a health care workforce that is too small and woefully unprepared to meet their specific health needs. Retooling for an Aging America calls for bold initiatives starting immediately to train all health care providers in the basics of geriatric care and to prepare family members and other informal caregivers, who currently receive little or no training in how to tend to their aging loved ones. The book also recommends that Medicare, Medicaid, and other health plans pay higher rates to boost recruitment and retention of geriatric specialists and care aides. Educators and health professional groups can use Retooling for an Aging America to institute or increase formal education and training in geriatrics. Consumer groups can use the book to advocate for improving the care for older adults. Health care professional and occupational groups can use it to improve the quality of health care jobs.

**Geriatrics for Specialists** - Andrew G. Lee 2021-08-31

This book aims to be a single point of reference for advances in the care of geriatric populations across medical and surgical specialties. The aging population is a unique demographic with its own health challenges. Geriatricians are specifically trained to address these challenges but few medical students or residents enter geriatrics, even as the demand for geriatric expertise increases. The practices of many medical and surgical specialists are dominated by older patients who may themselves see many specialists but rarely visit geriatricians. This updated edition elucidates the most common medical conditions seen in aging patients and translates approaches to those conditions for physicians across specialties. Divided into three sections that assemble crosscutting issues, medical specialties, and surgical and related specialties, this book serves as a guide for clinicians of all backgrounds who will work with older patients as the demographic ages further. This second edition of Geriatrics for Specialists expands the number of specialist chapters to reflect growth in research in aging and clinical care for older people in dermatology, plastic surgery, and behavioral neurology. All original chapters from the first edition are extensively revised and updated to reflect the rapid growth of new knowledge in the field.

Geriatric Emergency Medicine - Joseph H. Kahn 2014-01-16

As the global geriatric population continues to grow, an increasing proportion of people reporting to emergency departments are elderly. The work-up of these patients uses more time and resources than that of younger patients, and is complicated by the fact that acute disease often presents more subtly, without the outward manifestations typically seen in younger patients. This volume focuses on the unique pathophysiology of the elderly, presenting guidelines for resuscitation, evaluation and management. The first section discusses general principles including demographics, pharmacology and pain management. The following sections cover high-risk chief presenting complaints and review geriatric emergencies. Finally, topics of particular relevance in the geriatric population are discussed, including functional assessment, end-of-life care, financial considerations and abuse. This book provides a comprehensive, practical framework for community and academic emergency medicine practitioners, as well as emergency department administrators striving to improve delivery of care to this vulnerable, growing population.
