Ethics for the Information Age - Michael Jay Quinn 2006

Widely praised for its balanced treatment of computer ethics, *Ethics for the Information Age* offers a modern presentation of the moral controversies surrounding information technology. Topics such as privacy and intellectual property are explored through multiple ethical theories, encouraging readers to think critically about these issues and to make their own ethical decisions.

Genie - Susan Curtiss 2014-05-10

Genie: A Psycholinguistic Study of a Modern-Day "Wild Child" reports on the linguistic research carried out through studying and working with Genie, a deprived and isolated, to an unprecedented degree, girl who was not discovered until she was an adolescent. An inhuman childhood had prevented Genie from learning language, and she knew little about the world in any respect save abuse, neglect, isolation, and deprivation. This book is organized into three parts encompassing 11 chapters. Part I provides a case history and background material on Genie's personality and language behavior. This part describes the interaction between the authors and this remarkable girl. Part II details Genie's linguistic development and overall language abilities, specifically her phonological development, as well as receptive knowledge and productive grammatical abilities of syntax, morphology, and semantics. This part also provides a comparison between her linguistic development and the language

acquisition of other children. Part III presents a full description of the neurolinguistic work carried out on Genie and discusses the implications of this aspect of the case. This book will prove useful to neurolinguistics and psycholinguistics.

Apeirogon: A Novel - Colum McCann 2020-02-25

NEW YORK TIMES BESTSELLER • "A quite extraordinary novel. Colum McCann has found the form and voice to tell the most complex of stories, with an unexpected friendship between two men at its powerfully beating heart."—Kamila Shamsie, author of *Home Fire*
FINALIST FOR THE DUBLIN LITERARY AWARD • LONGLISTED FOR THE BOOKER PRIZE • WINNER OF THE NATIONAL JEWISH BOOK AWARD • NAMED ONE OF THE BEST BOOKS OF THE YEAR BY *The Independent* • *The New York Public Library* • *Library Journal* From the National Book Award-winning and bestselling author of *Let the Great World Spin* comes an epic novel rooted in the unlikely real-life friendship between two fathers. Bassam Aramin is Palestinian. Rami Elhanan is Israeli. They inhabit a world of conflict that colors every aspect of their lives, from the roads they are allowed to drive on to the schools their children attend to the checkpoints, both physical and emotional, they must negotiate. But their lives, however circumscribed, are upended one after the other: first, Rami's thirteen-year-old daughter, Smadar, becomes the victim of suicide bombers; a decade later, Bassam's ten-year-old daughter, Abir, is killed by a rubber bullet. Rami

and Bassam had been raised to hate one another. And yet, when they learn of each other's stories, they recognize the loss that connects them. Together they attempt to use their grief as a weapon for peace—and with their one small act, start to permeate what has for generations seemed an impermeable conflict. This extraordinary novel is the fruit of a seed planted when the novelist Colum McCann met the real Bassam and Rami on a trip with the non-profit organization Narrative 4. McCann was moved by their willingness to share their stories with the world, by their hope that if they could see themselves in one another, perhaps others could too. With their blessing, and unprecedented access to their families, lives, and personal recollections, McCann began to craft *Apeirogon*, which uses their real-life stories to begin another—one that crosses centuries and continents, stitching together time, art, history, nature, and politics in a tale both heartbreaking and hopeful. The result is an ambitious novel, crafted out of a universe of fictional and nonfictional material, with these fathers' moving story at its heart.

Debt - David Graeber 2012

Economic history states that money replaced a bartering system, yet there isn't any evidence to support this axiom. Anthropologist Graeber presents a stunning reversal of this conventional wisdom. For more than 5000 years, humans have used elaborate credit systems to buy and sell goods. Since the beginning of the agrarian empires, humans have been divided into debtors and creditors. Through time, virtual credit money was replaced by gold and the system as a whole went into decline. This fascinating history is told for the first time.

BIBLE, THE QUR AN & SCIENCE, - Maurice Bucaille 2003

American Beach - Russ Rymer 2000-01-01

A history of race relations in Florida focuses on the resort area founded by Florida's first Black millionaire

Sickened - Julie Gregory 2004-09-28

A remarkable memoir that speaks in an original and distinctive Midwestern voice, rising to indelible scenes in prose of scathing beauty and fierce humor. A young girl is perched on the cold chrome of yet another doctor's examining table,

missing yet another day of school. Just twelve, she's tall, skinny, and weak. It's four o'clock, and she hasn't been allowed to eat anything all day. Her mother, on the other hand, seems curiously excited. She's about to suggest open-heart surgery on her child to "get to the bottom of this." She checks her teeth for lipstick and, as the doctor enters, shoots the girl a warning glance. This child will not ruin her plans. From early childhood, Julie Gregory was continually X-rayed, medicated, and operated on—in the vain pursuit of an illness that was created in her mother's mind. Munchausen by proxy (MBP) is the world's most hidden and dangerous form of child abuse, in which the caretaker—almost always the mother—invents or induces symptoms in her child because she craves the attention of medical professionals. Many MBP children die, but Julie Gregory not only survived, she escaped the powerful orbit of her mother's madness and rebuilt her identity as a vibrant, healthy young woman. Punctuated with Julie's actual medical records, *Sickened* re-creates the bizarre cocoon of her family's isolated double-wide trailer, their wild shopping sprees and gun-waving confrontations, the astonishing naïveté of medical professionals and social workers. It also exposes the twisted bonds of terror and love that roped Julie's family together—including the love that made a child willing to sacrifice herself to win her mother's happiness. The realization that the sickness lay in her mother, not in herself, would not come to Julie until adulthood. But when it did, it would strike like lightning. Through her painful metamorphosis, she discovered the courage to save her own life—and, ultimately, the life of the girl her mother had found to replace her. *Sickened* takes us to new places in the human heart and spirit. It is an unforgettable story, unforgettably told.

Blown to Bits - Harold Abelson 2008

'Blown to Bits' is about how the digital explosion is changing everything. The text explains the technology, why it creates so many surprises and why things often don't work the way we expect them to. It is also about things the information explosion is destroying: old assumptions about who is really in control of our lives.

Introduction to the Science of Sociology - Robert E. Park 2014-04-03

Genie - Russ Rymer 1993

Case study of the linguistic and emotional progress of a 13 year old girl discovered in Nov. 1970 who had spent her life up to that point held prisoner in a room with virtually no outside communication.

Genie - Russ Rymer 1994

Manboob Nation - Nathan Goodyear 2014-02-27

Testosterone provides the hormonal foundation for masculinity, determining what it means to be male. So what does a global decline in testosterone levels say about the current generation of men? Why is the greatest testosterone decline seen in American men under the age of thirty? A broken, reactive medical system isn't concerning itself with answering these questions. The medical profession classifies testosterone loss as "testicular dysgenesis syndrome." Calling a condition a syndrome, however, is just a fancy medical term for "we don't know why this is happening." When a condition is classified as a syndrome, the symptoms receive treatment, not the cause. Nathan Goodyear, MD rejects reactive approaches to testosterone loss, as well as the pharmacological marketing that sees low testosterone as the latest cash cow. Instead, he offers a solution. Dr. Goodyear argues that low testosterone results from eight specific causes, backing up his claim with hard scientific facts and outlining treatment options for each cause. With proper treatment, low testosterone levels can be reversed.

Wild Ones - Jon Mooallem 2014-05-27

A Pop Up writer and contributor to several prestigious magazines tracks the dynamic relevance of America's animals throughout history to illuminate the current world's extinction threats, tracing his tour of environmental regions with his young daughter to trace the conservation efforts of such species as the polar bear and the whooping crane.

A Long Way Up - Evans G. Valens 1966

When she was Eighteen, a candidate for the U.S. Olympic skiing team, Jill Kinmont was injured

during a race and has been paralyzed ever since. That was in 1955. This biography describes the effect of her accident, how she changed, and with what courage she sought a new life as a teacher.

Fukushima - David Lochbaum 2015-02-10

"A gripping, suspenseful page-turner" (Kirkus Reviews) with a "fast-paced, detailed narrative that moves like a thriller" (International Business Times), Fukushima teams two leading experts from the Union of Concerned Scientists, David Lochbaum and Edwin Lyman, with award-winning journalist Susan Q. Stranahan to give us the first definitive account of the 2011 disaster that led to the worst nuclear catastrophe since Chernobyl. Four years have passed since the day the world watched in horror as an earthquake large enough to shift the Earth's axis by several inches sent a massive tsunami toward the Japanese coast and Fukushima Daiichi nuclear power plant, causing the reactors' safety systems to fail and explosions to reduce concrete and steel buildings to rubble. Even as the consequences of the 2011 disaster continue to exact their terrible price on the people of Japan and on the world, Fukushima addresses the grim questions at the heart of the nuclear debate: could a similar catastrophe happen again, and—most important of all—how can such a crisis be averted?

The Candle and the Flame - Nafiza Azad 2019-05-14

Azad's debut YA fantasy is set in a city along the Silk Road that is a refuge for those of all faiths, where a young woman is threatened by the war between two clans of powerful djinn.

Next to Nothing - Carrie Arnold 2007-08-03

More than simple cases of dieting gone awry, eating disorders such as anorexia and bulimia are among the most fatal of mental illnesses, responsible for more deaths each year than any other psychiatric disorder. These illnesses afflict millions of young people, especially women, all over the world. Carrie Arnold developed anorexia as an adolescent and nearly lost her life to the disease. In *Next to Nothing*, she tells the story of her descent into anorexia, how and why she fell victim to this mysterious illness, and how she was able to seek help and recover after years of therapy and hard work. Now an adult, Arnold uses her own experiences to offer

practical advice and guidance to young adults who have recently been diagnosed with an eating disorder, or who are at risk for developing one. Drawing on the expertise of B. Timothy Walsh, M.D., one of America's leading authorities on eating disorders, she reveals in easy-to-understand terms what is known and not known medically about anorexia and bulimia. The book covers such difficult topics as how to make sense of a diagnosis, the various psychotherapies available to those struggling with an eating disorder, psychiatric hospitalization, and how to talk about these illnesses to family and friends. The result is both a compelling memoir and a practical guide that will help to ease the isolation that an eating disorder can impose, showing young people how to manage and maintain their recovery on a daily basis. Part of the Adolescent Mental Health Initiative series of books written specifically for teens and young adults, *Next to Nothing* will also be a valuable resource to the friends and family of those with eating disorders. It offers much-needed hope to young people, helping them to overcome these illnesses and lead productive and healthy lives.

When Genius Failed - Roger Lowenstein
2001-10-09

"A riveting account that reaches beyond the market landscape to say something universal about risk and triumph, about hubris and failure."—The New York Times
NAMED ONE OF THE BEST BOOKS OF THE YEAR BY BUSINESSWEEK
In this business classic—now with a new Afterword in which the author draws parallels to the recent financial crisis—Roger Lowenstein captures the gripping roller-coaster ride of Long-Term Capital Management. Drawing on confidential internal memos and interviews with dozens of key players, Lowenstein explains not just how the fund made and lost its money but also how the personalities of Long-Term's partners, the arrogance of their mathematical certainties, and the culture of Wall Street itself contributed to both their rise and their fall. When it was founded in 1993, Long-Term was hailed as the most impressive hedge fund in history. But after four years in which the firm dazzled Wall Street as a \$100 billion moneymaking juggernaut, it suddenly suffered catastrophic losses that jeopardized not only the

biggest banks on Wall Street but the stability of the financial system itself. The dramatic story of Long-Term's fall is now a chilling harbinger of the crisis that would strike all of Wall Street, from Lehman Brothers to AIG, a decade later. In his new Afterword, Lowenstein shows that LTCM's implosion should be seen not as a one-off drama but as a template for market meltdowns in an age of instability—and as a wake-up call that Wall Street and government alike tragically ignored. Praise for *When Genius Failed* "[Roger] Lowenstein has written a squalid and fascinating tale of world-class greed and, above all, hubris."—BusinessWeek
"Compelling . . . The fund was long cloaked in secrecy, making the story of its rise . . . and its ultimate destruction that much more fascinating."—The Washington Post
"Story-telling journalism at its best."—The Economist

Arabian Nights In English Literature - Peter Caracciolo 1988-11-29

America's Other Audubon - Joy M. Kiser
2012-05-02

America's Other Audubon chronicles the story of Genevieve Jones, her family, and the making of an extraordinary nineteenth-century book, *Illustrations of the Nests and Eggs of Birds of Ohio*. At the age of twenty-nine, Genevieve Jones, an amateur naturalist/artist and daughter of a country doctor, visited the 1876 Centennial World's Fair in Philadelphia, where she saw Audubon's paintings in *Birds of America* on display. His artwork inspired her to undertake the production of a book illustrating the birds nests and eggs that Audubon neglected to include in his work. Her parents were reluctant to support the undertaking of such an ambitious and expensive project until Genevieve became despondent over a broken engagement. Concerned over her fragile mental state, they

encouraged her to begin the book as a distraction. Her brother collected the nests and eggs, her father paid for the publishing costs, and Genevieve and her girlhood friend learned lithography and began illustrating the specimens. The book was sold by subscription in twenty-three parts. When part one of Genevieve's work was issued, leading ornithologists praised the illustrations, and Rutherford B. Hayes and Theodore Roosevelt added their names to the subscription list. One reviewer wrote: It is one of the most beautiful and desirable works that has ever appeared in the United States upon any branch of natural history and ranks with Audubon's celebrated work on birds. Then, suddenly, Genevieve died of typhoid fever after personally completing only five of the illustrations. Her family took up the completion of the work in her memory. They labored for seven years until the book was completed in 1886; collecting nests and eggs, drawing lithographs on stone, and hand coloring fifty copies of each illustration, and writing the field notes for each species of bird. Both the brother who collected the nests and eggs and wrote the field notes, and the mother who completed the drawings on stone and hand coloring, were stricken with typhoid fever two years after Genevieve's death and nearly died. In spite of serious damage to their health, they never gave up and labored until the book was finished. The father covered the publishing costs, which were higher than had been anticipated and were not covered by the subscription price, and ultimately lost his entire retirement savings completing the task in his daughter's memory. The mother lost her eyesight at the end of her life from the effects of typhoid fever and long hours of straining to draw and color the nests and eggs. But neither parent ever complained and considered their work on the book the most important accomplishment of their lives. When the mother's copy of the volume was exhibited on the Chicago World's Fair in 1893, it was awarded a bronze medal. Only 90 copies of the book were produced and fewer than 20 have been located today in libraries or in private collections. America's Other Audubon includes a foreword by the Curator of Natural-History Rare Books at the Smithsonian, Leslie Overstreet, a prologue and

introduction by researcher and writer Joy M. Kiser (with archival photographs of the family and original advertisements and ephemera from the publication and sale of the book), the 68 original color plates of nests and eggs, plus selected field notes, a key to the eggs, and a key to the birds scientific and current common names (which have changed since the book first published in the nineteenth century). Joy Kiser has been friends with the Jones ancestors for fourteen years and has access to family photographs and documents that the general public has never seen. The Joneses story has never been fully told and no other author is better prepared to tell it.

The Science Wars - Keith M. Parsons 2003

Is science our most precious possession or has our culture elevated science into a false idol? Is technology a useful servant or a malign genie? These questions are at the centre of the 'science wars' currently being waged over the role and future of science and technology in our society. This balanced selection of a variety of perspectives on the hotly contested role of science and technology in contemporary society will clarify this vital debate for both specialists and non-specialists.

Phantoms in the Brain - V. S. Ramachandran 1999-08-18

Neuroscientist V.S. Ramachandran is internationally renowned for uncovering answers to the deep and quirky questions of human nature that few scientists have dared to address. His bold insights about the brain are matched only by the stunning simplicity of his experiments -- using such low-tech tools as cotton swabs, glasses of water and dime-store mirrors. In *Phantoms in the Brain*, Dr. Ramachandran recounts how his work with patients who have bizarre neurological disorders has shed new light on the deep architecture of the brain, and what these findings tell us about who we are, how we construct our body image, why we laugh or become depressed, why we may believe in God, how we make decisions, deceive ourselves and dream, perhaps even why we're so clever at philosophy, music and art. Some of his most notable cases: A woman paralyzed on the left side of her body who believes she is lifting a tray of drinks with both hands offers a unique opportunity to test Freud's theory of denial. A

man who insists he is talking with God challenges us to ask: Could we be "wired" for religious experience? A woman who hallucinates cartoon characters illustrates how, in a sense, we are all hallucinating, all the time. Dr. Ramachandran's inspired medical detective work pushes the boundaries of medicine's last great frontier -- the human mind -- yielding new and provocative insights into the "big questions" about consciousness and the self.

[The Privilege of Youth](#) - Dave Pelzer 2004-12-28
The #1 New York Times and #1 internationally bestselling author who is a shining example of what overcoming adversity really means now shares the lost chapter of his uplifting journey, which has touched the lives of millions. From *A Child Called "It"* to *The Lost Boy*, from *A Man Named Dave to Help Yourself*, Dave Pelzer's inspirational books have helped countless others triumph over hardship and misfortune. In *The Privilege of Youth*, he shares the missing chapter of his life: as a boy on the threshold of adulthood. With sensitivity and insight, he recounts the relentless taunting he endured from bullies; but he also describes the thrill of making his first real friends—some of whom he still shares close relationships with today. He writes about the simple pleasures of exploring his neighborhood, while trying to forget the hell waiting for him at home. From high school to a world beyond the four walls that were his prison for so many years, *The Privilege of Youth* bravely and compassionately charts this crucial turning point in Dave Pelzer's life and will inspire a whole new generation of readers.

The Uninhabitable Earth - David Wallace-Wells 2020-03-17

#1 NEW YORK TIMES BESTSELLER • "The *Uninhabitable Earth* hits you like a comet, with an overflow of insanely lyrical prose about our pending Armageddon."—Andrew Solomon, author of *The Noonday Demon* With a new afterword It is worse, much worse, than you think. If your anxiety about global warming is dominated by fears of sea-level rise, you are barely scratching the surface of what terrors are possible—food shortages, refugee emergencies, climate wars and economic devastation. An "epoch-defining book" (*The Guardian*) and "this generation's *Silent Spring*" (*The Washington Post*), *The Uninhabitable Earth* is both a

travelogue of the near future and a meditation on how that future will look to those living through it—the ways that warming promises to transform global politics, the meaning of technology and nature in the modern world, the sustainability of capitalism and the trajectory of human progress. *The Uninhabitable Earth* is also an impassioned call to action. For just as the world was brought to the brink of catastrophe within the span of a lifetime, the responsibility to avoid it now belongs to a single generation—today's. Praise for *The Uninhabitable Earth* "The *Uninhabitable Earth* is the most terrifying book I have ever read. Its subject is climate change, and its method is scientific, but its mode is Old Testament. The book is a meticulously documented, white-knuckled tour through the cascading catastrophes that will soon engulf our warming planet."—Farhad Manjoo, *The New York Times* "Riveting. . . . Some readers will find Mr. Wallace-Wells's outline of possible futures alarmist. He is indeed alarmed. You should be, too."—*The Economist* "Potent and evocative. . . . Wallace-Wells has resolved to offer something other than the standard narrative of climate change. . . . He avoids the 'eerily banal language of climatology' in favor of lush, rolling prose."—Jennifer Szalai, *The New York Times* "The book has potential to be this generation's *Silent Spring*."—*The Washington Post* "The *Uninhabitable Earth*, which has become a best seller, taps into the underlying emotion of the day: fear. . . . I encourage people to read this book."—Alan Weisman, *The New York Review of Books*

Bliss Brain - Dawson Church 2020-09-15

Award Winner in the Science category of the 2020 Best Book Awards sponsored by American Book Fest Award-winning author and thought leader Dawson Church, Ph.D., blends cutting-edge neuroscience with intense firsthand experience to show you how you can rewire your brain for happiness-starting right now. Neural plasticity-the discovery that the brain is capable of rewiring itself-is now widely understood. But what few people have grasped yet is how quickly this is happening, how extensive brain changes can be, and how much control each of us has over the process. In *Bliss Brain*, famed researcher Dawson Church digs deep into

leading-edge science, and finds stunning evidence of rapid and radical brain change. In just eight weeks of practice, 12 minutes a day, using the right techniques, we can produce measurable changes in our brains. These make us calmer, happier, and more resilient. When we cultivate these pleasurable states over time, they become traits. We don't just feel more blissful as a temporary state; the changes are literally hard-wired into our brains, becoming stable and enduring personality traits. The startling conclusions of Church's research show that neural remodeling goes much farther than scientists have previously understood, with stress circuits shriveling over time. Simultaneously, "The Enlightenment Circuit"- associated with happiness, compassion, productivity, creativity, and resilience-expands. During deep meditation, Church shows how "the 7 neurochemicals of ecstasy" are released in our brains. These include anandamide, a neurotransmitter that's been named "the bliss molecule" because it mimics the effects of THC, the active ingredient in cannabis. It boosts serotonin and dopamine; the first is an analog of psilocybin, the second of cocaine. He shows how cultivating these elevated emotional states literally produces a self-induced high. While writing Bliss Brain, Church went through a series of disasters, including escaping seconds ahead of a California wildfire that consumed his home and office and claimed 22 lives. The fire triggered a painful medical condition and a financial disaster. Through it all, Church steadily practiced the techniques of Bliss Brain while teaching them to thousands of other people. This book weaves his story of resilience into the fabric of neuroscience, producing a fascinating picture of just how happy we can make our brains, no matter what the odds.

Strange Glow - Timothy J. Jorgensen 2017-08-22
The fascinating science and history of radiation
More than ever before, radiation is a part of our modern daily lives. We own radiation-emitting phones, regularly get diagnostic x-rays, such as mammograms, and submit to full-body security scans at airports. We worry and debate about the proliferation of nuclear weapons and the safety of nuclear power plants. But how much do we really know about radiation? And what are its actual dangers? An accessible blend of narrative

history and science, *Strange Glow* describes mankind's extraordinary, thorny relationship with radiation, including the hard-won lessons of how radiation helps and harms our health. Timothy Jorgensen explores how our knowledge of and experiences with radiation in the last century can lead us to smarter personal decisions about radiation exposures today. Jorgensen introduces key figures in the story of radiation—from Wilhelm Roentgen, the discoverer of x-rays, and pioneering radioactivity researchers Marie and Pierre Curie, to Thomas Edison and the victims of the recent Fukushima Daiichi nuclear power plant accident. Tracing the most important events in the evolution of radiation, Jorgensen explains exactly what radiation is, how it produces certain health consequences, and how we can protect ourselves from harm. He also considers a range of practical scenarios such as the risks of radon in our basements, radiation levels in the fish we eat, questions about cell-phone use, and radiation's link to cancer. Jorgensen empowers us to make informed choices while offering a clearer understanding of broader societal issues. Investigating radiation's benefits and risks, *Strange Glow* takes a remarkable look at how, for better or worse, radiation has transformed our society.

Together Apart - Jolanda Jetten 2020-07-13
Written by leading social psychologists with expertise in leadership, health and emergency behaviour - who have also played an important role in advising governments on COVID-19 - this book provides a broad but integrated analysis of the psychology of COVID-19. It explores the response to COVID-19 through the lens of social identity theory, drawing from insights provided by four decades of research. Starting from the premise that an effective response to the pandemic depends upon people coming together and supporting each other as members of a common community, the book helps us to understand emerging processes related to social (dis)connectedness, collective behaviour and the societal effects of COVID-19. In this it shows how psychological theory can help us better understand, and respond to, the events shaping the world in 2020. Considering key topics such as: Leadership Communication Risk perception Social isolation Mental health Inequality

Misinformation Prejudice and racism Behaviour change Social Disorder This book offers the foundation on which future analysis, intervention and policy can be built. We are proud to support the research into Covid-19. We are delighted that on publication the finalised eBook will be free. For those who prefer print, it will be possible to purchase a paperback version. All Royalties from this book will be donated to the Save the Children charity. Sophie's World - Jostein Gaarder 2007-03-20
One day Sophie comes home from school to find two questions in her mail: "Who are you?" and "Where does the world come from?" Before she knows it she is enrolled in a correspondence course with a mysterious philosopher. Thus begins Jostein Gaarder's unique novel, which is not only a mystery, but also a complete and entertaining history of philosophy.

Evolutionary Restraints - Mark E. Borrello 2010-10-15
Much of the evolutionary debate since Darwin has focused on the level at which natural selection occurs. Most biologists acknowledge multiple levels of selection—from the gene to the species. The debate about group selection, however, is the focus of Mark E. Borrello's *Evolutionary Restraints*. Tracing the history of biological attempts to determine whether selection leads to the evolution of fitter groups, Borrello takes as his focus the British naturalist V. C. Wynne-Edwards, who proposed that animals could regulate their own populations and thus avoid overexploitation of their resources. By the mid-twentieth century, Wynne-Edwards became an advocate for group selection theory and led a debate that engaged the most significant evolutionary biologists of his time, including Ernst Mayr, G. C. Williams, and Richard Dawkins. This important dialogue bled out into broader conversations about population regulation, environmental crises, and the evolution of human social behavior. By examining a single facet in the long debate about evolution, Borrello provides powerful insight into an intellectual quandary that

remains relevant and alive to this day.

American Prometheus - Kai Bird 2007-12-18
WINNER OF THE PULITZER PRIZE FOR NONFICTION • "The definitive biography"

(Newsweek) of J. Robert Oppenheimer, one of the iconic figures of the twentieth century, a brilliant physicist who led the effort to build the atomic bomb for his country in a time of war, and who later found himself confronting the moral consequences of scientific progress. In this magisterial, acclaimed biography twenty-five years in the making, Kai Bird and Martin Sherwin capture Oppenheimer's life and times, from his early career to his central role in the Cold War. This is biography and history at its finest, riveting and deeply informative. "A masterful account of Oppenheimer's rise and fall, set in the context of the turbulent decades of America's own transformation. It is a tour de force." —Los Angeles Times Book Review

Paris Twilight - Russ Rymer 2013-07-02
A novel that "elegantly weaves together many strands—the political, the historical, and the romantic, richly braided with adventure" (Claire Messud, author of *The Woman Upstairs*). Paris, 1990. While demonstrations against the First Gulf War rage, Matilde Anselm, professor of cardiac anesthesiology, arrives in the City of Light from New York to be part of the surgical team performing a heart transplant—and soon finds herself falling in love with a suave Arab diplomat. Even as her concerns mount over shadowy protocols surrounding the planned transplant, a surprise inheritance—a mysterious apartment and trove of love letters from the Spanish Civil War, bequeathed to her by a stranger—sweeps Matilde through a hidden Paris and into the labyrinth of her own buried past. As the diplomat and the apartment reluctantly reveal their secrets, the tragedies they unearth open a further mystery: the enigma that has haunted Matilde's life. A dizzying tale of personal transformation, Russ Rymer's "richly plotted, ardently imagined first novel" is populated by "unforgettable characters [who] grapple with the mystery of what love means, and what it costs" (Geraldine Brooks, author of *People of the Book*). "Russ Rymer is a virtuoso of mystery and misapprehension. With *Paris Twilight*, he has created a novel of fine intelligence that richly rewards the reader's

closest attention. An American original." —Ward Just, author of *An Unfinished Season* and *Exiles in the Garden*

Classic Case Studies in Psychology - Geoff Rolls
2013-07-24

Have you heard about the man who lived with a hole in his head? Or the boy raised by his parents as a girl? From the woman with multiple personalities, to the man with no brain, this collection of case studies provides a compelling insight into the human mind. This is a fascinating collection of human stories. Some are well-known case studies that have informed clinical practice, others are relatively unknown. For this edition, Rolls has added recent research findings on each case study plus four brand new cases: the story of Washoe, the ape who could communicate; the much debated case of Holly Ramona and repressed memory; and Kim Peek, the real 'Rainman'. *Classic Case Studies in Psychology* is for everyone who has ever wondered about the stranger side of life. No prior knowledge of psychology is required, just an open mind. For those who wish to use this book as part of their studies, or who are just keen to learn more, fun multiple choice questions, fascinating further reading, helpful web links, and self-assessment questions are all available free on our website, www.routledge.com/cw/rolls. Prepare to be amazed ...

Chernobyl - Serhii Plokhyy 2018-05-15

A Chernobyl survivor and the New York Times bestselling author of *The Gates of Europe* "mercilessly chronicles the absurdities of the Soviet system" in this "vividly empathetic" account of the worst nuclear accident in history (*Wall Street Journal*). On the morning of April 26, 1986, Europe witnessed the worst nuclear disaster in history: the explosion of a reactor at the Chernobyl Nuclear Power Plant in Soviet Ukraine. Dozens died of radiation poisoning, fallout contaminated half the continent, and thousands fell ill. In *Chernobyl*, Serhii Plokhyy draws on new sources to tell the dramatic stories of the firefighters, scientists, and soldiers who heroically extinguished the nuclear inferno. He lays bare the flaws of the Soviet nuclear industry, tracing the disaster to the authoritarian character of the Communist party rule, the regime's control over scientific

information, and its emphasis on economic development over all else. Today, the risk of another Chernobyl looms in the mismanagement of nuclear power in the developing world. A moving and definitive account, *Chernobyl* is also an urgent call to action.

Men of Terror - WILLIAM R. SHORT 2021-07-15

An Interdisciplinary Study of Viking Culture that Dispels Myths and Expands Our Understanding of Their World Sometime near the end of the tenth century, a man named Fraði died in Sweden. His kinsmen raised a granite runestone to his memory in Denmark. The carved message appears to tell us that Fraði was "first among all Vikings" and that he was the "terror of men." Known sources about the Vikings revolve around the constant threat of violence: literary and artistic sources from both inside and outside Viking lands, including poetry, myths, stories, and artwork; law codes; burial practices; weapons; even their ship and house architecture. Based on nearly two decades of research, *Men of Terror: A Comprehensive Analysis of Viking Combat* is a heavily illustrated interdisciplinary study of the heart of Viking society: weapons and combat. Relying on a vast array of sources from a wide range of fields, research scientist William R. Short and independent scholar and martial arts instructor Reynir A. Óskarson dig deep into the culture of men like Fraði to better understand the mindset and performance of Viking warriors that led them to venerate and praise acts of violence and aggression. In the process they have painstakingly reverse-engineered Viking combat techniques to account for the archaeology we have. Along the way, they answer questions such as, Were there women warriors? Why did Vikings burn their enemies alive inside their homes? Why were these brutal, horrific acts such as raiding held in such high esteem? Through their comprehensive research, the authors present a holistic picture of this society from what previously had only been disparate and intriguing parts. By the end of the book, the reader will understand the importance of combat to Viking society, the nature of that combat, and the code of these "men of terror."

Robert Ludlum's (TM) The Bourne Objective - Eric Van Lustbader 2010-06-01

A Jason Bourne novel from the #1 New York

Times bestselling author Facing down mercenaries in Africa, Jason Bourne witnesses the death of an art dealer named Tracy Atherton. Her killing dredges up snippets of Bourne's impaired memory, in particular the murder of a young woman on Bali who entrusted him with a strangely engraved ring-an artifact of such powerful significance that people have killed to obtain it. Now he's determined to find the ring's owner and purpose. But Bourne never knows what terrible acts he'll discover he committed when he digs into the past. The trail will lead him through layers of conspiracy to a vicious Russian mercenary, Leonid Arkadin, who was also a graduate of the Central Intelligence training program Treadstone. A covert course designed to create ruthless assassins for C.I., it was shuttered by Congress for corruption. Yet before it was dismantled, it produced Bourne and Arkadin, giving them equal skills, equal force, and equal cunning. As Bourne's destiny circles closer to Arkadin's, it becomes clear that the eventual collision of these men is not of their own making. Someone else has been watching and manipulating them. Someone who wants to know, Who is the more deadly agent?

The Tragedy of Jonathan Brandis - Brandon R Burdette 2020-01-18

How could someone go from being on top of the world to being an absolute zero? How could someone go from being adored by all to being forgotten by all? How could someone go from being successful, happy, and full of dreams to being rejected, miserable, and hopeless? Jonathan Brandis was one of the most successful and prolific child prodigies to ever dazzle the entertainment industry. But as soon as he turned 20, Hollywood discarded him. For the next 7 years, he was virtually a ghost, and his talent never got the recognition it deserved again. He was found hanging in a public hallway at the age of 27. "The Tragedy of Jonathan Brandis" is an essay which seeks to analyze his tragedy, and honor his memory. There are no biographies, nor any documentaries about him, that exist.

Mind to Matter - Dawson Church 2019-08-06

Best Health Book of 2018 - American Book Fest.

Best Science Books of 2018 - Bookbub. Every creation begins as a thought, from a symphony to a marriage to an ice cream cone to a rocket launch. When we have an intention, a complex chain of events begins in our brains. Thoughts travel as electrical impulses along neural pathways. When neurons fire together they wire together, creating electromagnetic fields. These fields are invisible energy, yet they influence the molecules of matter around us the way a magnet organizes iron filings. In Mind to Matter, award-winning researcher Dawson Church explains the science showing how our minds create matter. Different intentions produce different fields and different material creations. The thoughts and energy fields we cultivate in our minds condition the atoms and molecules around us. We can now trace the science behind each link in chain from thought to thing, showing the surprising ways in which our intentions create the material world. The science in the book is illustrated by many authentic case histories of people who harnessed the extraordinary power of the mind to create. They include: Adeline, whose Stage 4 cancer disappeared after she imagined "healing stars" Raymond Aaron and two of his clients, each of whom manifested \$1 million in the same week Elon Musk, who bounced back from devastating tragedy to found Tesla and SpaceX Graham Phillips, who grew the emotional regulation part of his brain by 22.8% in two months Jennifer Graf, whose grandfather's long-dead radio came to life to play love songs the day of her wedding Harold, whose 80% hearing loss reversed in an hour Joe Marana, whose deceased sister comforted him from beyond the grave Rick Geggie, whose clogged arteries cleared up the night before cardiac surgery Matthias Rust, a teen whose "airplane flight for peace" changed the fate of superpowers Wanda Burch, whose dream about cancer told the surgeon exactly where to look for it An MIT freshman student who can precipitate sodium crystals with his mind John, who found himself floating out of his body and returned to find his AIDS healed Dean, whose cortisol levels dropped by 48% in a single hour In Mind to Matter, Dawson Church shows that these outcomes aren't a lucky accident only a few people experience. Neuroscientists have measured a specific brain wave formula that is linked to manifestation. This "flow state" can be

learned and applied by anyone. New discoveries in epigenetics, neuroscience, electromagnetism, psychology, vibration, and quantum physics connect each step in the process by which mind creates matter. They show that the whole universe is self-organizing, and when our minds are in a state of flow, they coordinate with nature's emergent intelligence to produce synchronous outcomes. The book contained over 150 photos and illustrations that explain the process, while an "Extended Play" section at the end of each chapter provides additional

resources. As Mind to Matter drops each piece of the scientific puzzle into place, it leaves us with a profound understanding of the enormous creative potential of our minds. It also gives us a road map to cultivating these remarkable brain states in our daily lives.

Genie - Russ Rymer 1994-01-12

The compelling story of a young woman's emergence into the world after spending her first 13 years strapped to a chair, and her rescue and exploitation by scientists hoping to gain new insight into language acquisition.
