Public Health in Austria - Joy Ladurner 2011
This book explores the key challenges facing Austria's public health system. Set firmly in the context of the history, scope, functions and responsibilities of public health in developed countries, it examines how the Austrian system has developed and adapted over the last 50 years to the benefit of the population. It also looks at the challenges presented by life in the 21st century. The book draws on both national research and expert interviews to present a fully-rounded picture. This shows that the public health system in Austria is struggling to maintain essential services and develop policies for improvement, and the study proposes strategies and policies to tackle these developments, looking in particular at change within the fields of education, research and training. This book is essential reading for policy-makers, advisers and analysts interested in developing a public health strategy and competence in both developed and developing countries, as well as researchers interested in the Austrian health system.

Core Concepts in Supramolecular Chemistry and Nanochemistry - Jonathan W. Steed 2007-04-30
Supramolecular chemistry and nanochemistry are two strongly interrelated cutting edge frontiers in research in the chemical sciences.

The results of recent work in the area are now an increasing part of modern degree courses and hugely important to researchers. Core Concepts in Supramolecular Chemistry and Nanochemistry clearly outlines the fundamentals that underlie supramolecular chemistry and nanochemistry and takes an umbrella view of the whole area. This concise textbook traces the fascinating modern practice of the chemistry of the non-covalent bond from its fundamental origins through to its expression in the emergence of nanochemistry. Fusing synthetic materials and supramolecular chemistry with crystal engineering and the emerging principles of nanotechnology, the book is an ideal introduction to current chemical thought for researchers and a superb resource for students entering these exciting areas for the first time. The book builds from first principles rather than adopting a review style and includes key references to guide the reader through influential work. supplementary website featuring powerpoint slides of the figures in the book further references in each chapter builds from first principles rather than adopting a review style includes chapter on nanochemistry clear diagrams to highlight basic principles

Initial Airworthiness - Guy Gratton 2014-12-03
Designed as an introduction for both advanced students in aerospace engineering and existing aerospace engineers, this book covers both engineering theory and professional practice in establishing the airworthiness of new and modified aircraft. Initial Airworthiness includes:
· how structural, handling, and systems evaluations are carried out;
· the processes by which safety and fitness for purpose are determined; and
· the use of both US and European unit systems
Covering both civil and military practice and the current regulations and standards across Europe and North America, Initial Airworthiness will give the reader an understanding of how all the major aspects of an aircraft are certified, as well as providing a valuable source of reference for existing practitioners.

The Common European Sales Law in Context - Gerhard Dannemann 2013-03-21
European Contract Law unification projects have recently advanced from the Draft Common Frame of Reference (2009) to a European

Commission proposal for an optional Common European Sales Law (2011) which is to facilitate cross-border marketing. This book investigates for the first time how CESL and DCFR rules would interact with various aspects of domestic law, represented by English and German law. Nineteen chapters, co-authored by British and German scholars, examine such interface issues for eg pre-contractual relationships, notions of contract, formation, interpretation, and remedies, extending to non-discrimination, third parties, transfers or rights, aspects of property law, and collective proceedings. They go beyond a critical analysis of CESL and DCFR rules by demonstrating where and how CESL rules would interact with neighbouring areas of English and German law before English and German courts, how domestic traditions might influence the application, which aspects might motivate sellers and buyers to choose or reject CESL, and which might serve as model for national legislators. The findings are summarized in the final two chapters.

American Flying Boats and Amphibious Aircraft - E.R. Johnson 2016-03-29

This work is a comprehensive, heavily illustrated history of the many flying boats and amphibious aircraft designed and built in the United States. It is divided into three chronological sections: the early era (1912-1928), the golden era (1928-1945), and the post-war era (1945-present), with historical overviews of each period. Within each section, individual aircraft types are listed in alphabetical order by manufacturer or builder, with historical background, technical specifications, drawings, and one or more photographs. Appendices cover lesser known flying boat and amphibian types as well as various design concepts that never achieved the flying stage.
