Perspectives in Civil Engineering - Jeffrey S. Russell 2003-01-01
This report contains 27 papers that serve as a testament to the state-of-the-art of civil engineering at the outset of the 21st century, as well as to commemorate the ASCE's Sesquicentennial. Written by the leading practitioners, educators, and researchers of civil engineering, each of these peer-reviewed papers explores a particular aspect of civil engineering knowledge and practice. Each paper explores the development of a particular civil engineering specialty, including milestones and future barriers, constraints, and opportunities. The papers celebrate the history, heritage, and accomplishments of the profession in all facets of practice, including construction facilities, special structures, engineering mechanics, surveying and mapping, irrigation and water quality, forensics, computing, materials, geotechnical engineering, hydraulic engineering, and transportation engineering. While each paper is unique, collectively they provide a snapshot of the profession while offering thoughtful predictions of likely developments in the years to come. Together the papers illuminate the mounting complexity facing civil engineering stemming from rapid growth in scientific knowledge, technological development, and human populations, especially in the last 50 years. An overarching theme is the need for systems-level approaches and consideration from undergraduate education through advanced engineering materials, processes, technologies, and design methods and tools. These papers speak to the need for civil engineers of all specialties to recognize and embrace the growing interconnectedness of the global infrastructure, economy, society, and the need to work for more sustainable, life-cycle-oriented solutions. While embracing the past and the present, the papers collected here clearly have an eye on the future needs of ASCE and the civil engineering profession.

Developments in fiber-reinforced polymer (FRP) composites for civil engineering - P. Qiao 2013-05-15

This chapter presents a systematic approach for material characterization, analysis, and design of all-fiber-reinforced polymer or plastic (FRP) composite structures. The suggested 'bottom-up' analysis concept is applied throughout the procedure, from materials/microstructures, to macro components, to structural members, and finally to structural systems, thus providing a systematic analysis methodology for all-FRP composite structures. The systematic approach described in this chapter can be used efficiently to analyze and design FRP shapes and bridge systems and also develop new design concepts for all composite structures.

Leadership Genetic Engineering Formula: - Agola Auma-Osolo 2013-11-25

This book is the omega of volume 1 titled Why Leaders Fail and Plunge the Innocent into a Sea of Agonies; hence, its justified designation as volume 2. Its purpose is to complete the marathon research expedition commenced by volume 1 (alfa) to search for the mysteries surrounding and being responsible for mans chronic failure in the art of leadership, which has consequently always plunged the innocent under a failed leader into a sea of various acute agonies throughout all generations. In this regard, this volume is an etiology and prognosis of leadership failure epidemic that has evaded recognition of every past research effort to unlock and paralyze those mysteries responsible for its existence. Using this double-edged methodology and burning ambition, the volume systematically and vigorously synthesizes the root causes of this virus into a coherent body of knowledge that has, in the end, led to formulation of a leadership genetic engineering formula viz: elite and grass root conflict vaccination, able to provide humanity with an enabling environment of a hybrid culture requisite for good governance, democracy, and prosperity for all. This formula is a function of the discovery of a similar formula formulated and used by the ancient Egyptian people (70005000 BC), which enabled them to develop into an extraordinary hybrid culture and good leadership that, in turn, led them into a nation of immense prosperity, surpassing all other nations of their generation in Asia Minor and the Mediterranean. Hence, the unique significance of the research efforts contained in this volume 2 in its capacity as a long-lived breakthrough for social sciencesand political science, in particularagainst the scourge of bad leadership to humanity. And hence, its justification as an omega of this marathon research expedition.

Fluid Mechanics, Hydraulics, Hydrology and Water Resources for Civil Engineers - Amithirigala Widhanelage Jayawardena 2021-01-27
One of the core areas of study in civil engineering concerns water that encompasses fluid mechanics, hydraulics and hydrology. Fluid mechanics provide the mathematical and scientific basis for hydraulics and hydrology that also have added empirical and practical contents. The knowledge contained in these three subjects is necessary for the optimal and equitable management of this precious resource that is not always available when and where it is needed, sometimes with conflicting demands. The objective of Fluid Mechanics, Hydraulics, Hydrology and Water Resources for Civil Engineers is to assimilate these core study areas into a single source of knowledge. The contents highlight the theory and applications supplemented with worked examples and also include comprehensive references for follow-up studies. The primary

readership is civil engineering students who would normally go through these core subject areas sequentially spread over the duration of their studies. It is also a reference for practicing civil engineers in the water sector to refresh and update their skills.

Constitutive Equations for Engineering Materials - Wai-Fah Chen 2013-10-22
Constitutive Equations for Engineering Materials, Volume 1: Elasticity and Modeling, Revised Edition focuses on theories on elasticity and plasticity of engineering materials. The book first discusses vectors and tensors. Coordinate systems, vector algebra, scalar products, vector products, transformation of coordinates, indicial notation and summation convention, and triple products are then discussed. The text also ponders on analysis of stress and strain and presents numerical analysis. The book then discusses elastic stress-strain relations. Basic assumptions; need for elastic models; isotropic linear stress-strain relations; principle of virtual work; strain energy and complementary energy density in elastic solids; and incremental relations grounded on secant moduli are described. The text also explains linear elasticity and failure criteria for concrete and non-linear elasticity and hypoelastic models for concrete. The selection further tackles soil elasticity and failure criteria. Mechanical behavior of soils; failure criteria of soils; and incremental stress-strain models based on modification of the isotropic linear elastic formulation are considered. The text is a good source of data for readers interested in studying the elasticity and plasticity of engineering materials.
