The Fall of the Philippines - Louis Morton 2016-03-26
The soldier reading these pages would do well to reflect on the wisdom of the statement exhibited in a Japanese shrine: "Woe unto him who has not tasted defeat." Victory too often leads to overconfidence and erases the memory of mistakes. Defeat brings into sharp focus the causes that led to failure and provides a fruitful field of study for those soldiers and laymen who seek in the past lessons for the

future. The statesman and the informed citizen reading these pages will realize that our military means as well as our estimates and plans must always be in balance with our long-range national policy. This lesson signposted by the Battle of Manila Bay; the Treaty of Paris, signed in December 1898 when we decided to keep the Philippines; the Washington Conference of 1921-22; and the Manchurian Crisis of 1931 we ignored before Pearl Harbor. The result

was defeat on the field of battle and the loss of the Philippine Islands. Work on this volume was begun in early 1947. The reader may gain some idea of the size of the task of writing this history by an appraisal of The Sources.

A Little History of the World

- E. H. Gombrich 2014-10-01
E. H. Gombrich's Little History of the World, though written in 1935, has become one of the treasures of historical writing since its first publication in English in 2005. The Yale edition alone has now sold over half a million copies, and the book is available worldwide in almost thirty languages. Gombrich was of course the best-known art historian of his time, and his text suggests illustrations on every page. This illustrated edition of the Little History brings together the pellucid humanity of his narrative with the images that may well have been in his mind's eye as he wrote the book. The two hundred

illustrations—most of them in full color—are not simple embellishments, though they are beautiful. They emerge from the text, enrich the author's intention, and deepen the pleasure of reading this remarkable work. For this edition the text is reset in a spacious format, flowing around illustrations that range from paintings to line drawings, emblems, motifs, and symbols. The book incorporates freshly drawn maps, a revised preface, and a new index. Blending high-grade design, fine paper, and classic binding, this is both a sumptuous gift book and an enhanced edition of a timeless account of human history.

Hazardous Waste Minimization - Harry Freeman 1990

Minimizing waste generation offers cost-effective advantages over devising complex disposal treatment plans. Now a leading member of the EPS's Waste Minimization Research Program has assembled the latest ideas for assessing, planning, and implementing waste minimization programs in government and industry alike. Describing successful in-place programs, he demonstrates the compelling economics of waste minimization and discloses practical methods within most any organizational budget—including improved inventory management, materials substitution, process modifications, plant recycling, and more.

Spearhead of Logistics -
Benjamin King 2016-02-25
Spearhead of Logistics is a
narrative branch history of the
U.S. Army's Transportation
Corps, first published in 1994
for transportation personnel
and reprinted in 2001 for the
larger Army community. The
Quartermaster Department
coordinated transportation
support for the Army until
World War I revealed the need
for a dedicated corps of
specialists. The newly
established Transportation
Corps, however, lasted for only
a few years. Its significant
utility for coordinating military
transportation became again
transparent during World War
II, and it was resurrected in

mid-1942 to meet the
unparalleled logistical
demands of fighting in distant
theaters. Finally becoming a
permanent branch in 1950, the
Transportation Corps
continued to demonstrate its
capability of rapidly supporting
U.S. Army operations in global
theaters over the next fifty
years. With useful lessons of
high-quality support that
validate the necessity of
adequate transportation in a
viable national defense
posture, it is an important
resource for those now
involved in military
transportation and movement
for ongoing expeditionary
operations. This text should be
useful to both officers and
noncommissioned officers who
can take examples from the
past and apply the successful
principles to future operations,
thus ensuring a continuing
legacy of Transportation
excellence within Army
operations. Additionally,
military science students and
military historians may be
interested in this volume.

The 71F Advantage - National Defense University Press
2010-09-01

Includes a foreword by Major General David A. Rubenstein. From the editor: "71F, or "71 Foxtrot," is the AOC (area of concentration) code assigned by the U.S. Army to the specialty of Research Psychology. Qualifying as an Army research psychologist requires, first of all, a Ph.D. from a research (not clinical) intensive graduate psychology program. Due to their advanced education, research psychologists receive a direct commission as Army officers in the Medical Service Corps at the rank of captain. In terms of numbers, the 71F AOC is a small one, with only 25 to 30 officers serving in any given year. However, the 71F impact is much bigger than this small cadre suggests. Army research psychologists apply their extensive training and expertise in the science of psychology and social behavior

toward understanding, preserving, and enhancing the health, well being, morale, and performance of Soldiers and military families. As is clear throughout the pages of this book, they do this in many ways and in many areas, but always with a scientific approach. This is the 71F advantage: applying the science of psychology to understand the human dimension, and developing programs, policies, and products to benefit the person in military operations. This book grew out of the April 2008 biennial conference of U.S. Army Research Psychologists, held in Bethesda, Maryland. This meeting was to be my last as Consultant to the Surgeon General for Research Psychology, and I thought it would be a good idea to publish proceedings, which had not been done before. As Consultant, I'd often wished for such a document to help explain to people what it is that Army Research Psychologists "do for a living." In addition to

our core group of 71Fs, at the Bethesda 2008 meeting we had several brand-new members, and a number of distinguished retirees, the "grey-beards" of the 71F clan. Together with longtime 71F colleagues Ross Pastel and Mark Vaitkus, I also saw an unusual opportunity to capture some of the history of the Army Research Psychology specialty while providing a representative sample of current 71F research and activities. It seemed to us especially important to do this at a time when the operational demands on the Army and the total force were reaching unprecedented levels, with no sign of easing, and with the Army in turn relying more heavily on research psychology to inform its programs for protecting the health, well being, and performance of Soldiers and their families."
